- VG Vegetation Condition

Vegetation Condition

- Very Good
- Degraded
- Completely Degraded

Vegetation Condition
(SOURCE: Bush Forever, Govt. of W.A., 2000)

P - Pristine
Pristine or nearly so, no obvious signs of disturbance.

Ex - Excellent
Vegetation structure intact, disturbance affecting individual species and weeds are non aggressive species.

VG - Very Good
Vegetation structure altered, obvious signs of disturbance. For example, disturbance to vegetation structure caused by repeated fires, the presence of some more aggressive weeds, dieback, logging and grazing.

G - Good
Vegetation structure significantly altered by very obvious signs of multiple disturbance. Retains basic vegetation structure or ability to regenerate it. For example, disturbance to vegetation structure caused by very frequent fires, the presence of some very aggressive weeds at high density, partial clearing, dieback and grazing.

D - Degraded
Basic vegetation structure severely impacted by disturbance. Scope for regeneration but not to a state approaching good condition without intensive management. For example, disturbance to vegetation structure caused by very frequent fires, the presence of very aggressive weeds, partial clearing, dieback and grazing.

CD - Completely Degraded
The structure of the vegetation is no longer intact and the areas is completely or almost completely without native species. These areas are often described as 'parkland cleared' with the flora composing weed or crop species with isolated native trees or shrubs.

Cl - Cleared
No native vegetation remaining.

Protected Matters Search Tool Report

EPBC Act Protected Matters Report

This report provides general guidance on matters of national environmental significance and other matters protected by the EPBC Act in the area you have selected. Please see the caveat for interpretation of information provided here.

Report created: 11-Nov-2022

Summary
Details
- Matters of NES
- Other Matters Protected by the EPBC Act
- Extra Information

Summary

Matters of National Environment Significance

This part of the report summarises the matters of national environmental significance that may occur in, or may relate to, the area you nominated. Further information is available in the detail part of the report, which can be accessed by scrolling or following the links below. If you are proposing to undertake an activity that may have a significant impact on one or more matters of national environmental significance then you should consider the Administrative Guidelines on Significance.

World Heritage Properties:	None
National Heritage Places:	None
Wetlands of International Importance (Ramsar	None
Great Barrier Reef Marine Park:	None
Commonwealth Marine Area:	None
Listed Threatened Ecological Communities:	7
Listed Threatened Species:	58
Listed Migratory Species:	25

Other Matters Protected by the EPBC Act

This part of the report summarises other matters protected under the Act that may relate to the area you nominated. Approval may be required for a proposed activity that significantly affects the environment on Commonwealth land, when the action is outside the Commonwealth land, or the environment anywhere when the action is taken on Commonwealth land. Approval may also be required for the Commonwealth or Commonwealth agencies proposing to take an action that is likely to have a significant impact on the environment anywhere.

The EPBC Act protects the environment on Commonwealth land, the environment from the actions taken on Commonwealth land, and the environment from actions taken by Commonwealth agencies. As heritage values of a place are part of the 'environment', these aspects of the EPBC Act protect the Commonwealth Heritage values of a Commonwealth Heritage place. Information on the new heritage laws can be found at https://www.dcceew.gov.au/parks-heritage/heritage

A permit may be required for activities in or on a Commonwealth area that may affect a member of a listed threatened species or ecological community, a member of a listed migratory species, whales and other cetaceans, or a member of a listed marine species.

Commonwealth Lands:	125
Commonwealth Heritage Places:	None
Listed Marine Species:	30
Whales and Other Cetaceans:	None
Critical Habitats:	None
Commonwealth Reserves Terrestrial:	None
Australian Marine Parks:	None
Habitat Critical to the Survival of Marine Turtles:	None

Extra Information

This part of the report provides information that may also be relevant to the area you have

State and Territory Reserves:	13
Regional Forest Agreements:	1
Nationally Important Wetlands:	2
EPBC Act Referrals:	20
Key Ecological Features (Marine):	None
Biologically Important Areas:	None
Bioregional Assessments:	None
Geological and Bioregional Assessments:	None

Details

Matters of National Environmental Significance

Listed Threatened Ecological Communities [Resource Information]

For threatened ecological communities where the distribution is well known, maps are derived from recovery plans, State vegetation maps, remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.
Status of Vulnerable, Disallowed and Ineligible are not MNES under the EPBC Act.

Community Name	Threatened Category	Presence Text	Buffer Status
Banksia Woodlands of the Swan Coastal Plain ecological community	Endangered	Community likely to occur within area	In feature area
Clay Pans of the Swan Coastal Plain	Critically Endangered	Community likely to occur within area	In buffer area only
Corymbia calophylla - Kingia australis woodlands on heavy soils of the Swan Coastal Plain	Endangered	Community known to occur within area	In feature area
Corymbia calophylla - Xanthorrhoea preissii woodlands and shrublands of the Swan Coastal Plain	Endangered	Community known to occur within area	In buffer area only
Shrublands and Woodlands of the eastern Swan Coastal Plain	Endangered	Community known to occur within area	In feature area
Subtropical and Temperate Coastal Saltmarsh	Vulnerable	Community likely to occur within area	In buffer area only
Tuart (Eucalyptus gomphocephala) Woodlands and Forests of the Swan Coastal Plain ecological community	Critically Endangered	Community may occur within area	In feature area

Listed Threatened Species [Resource Information]

Status of Conservation Dependent and Extinct are not MNES under the EPBC Act.
Number is the current name ID.

Scientific Name	Threatened Category	Presence Text	Buffer Status
BIRD			
Botaurus poiciloptilus			
Australasian Bittern [1001]	Endangered	Species or species habitat likely to occur within area	In feature area
Calidris ferruginea			
Curlew Sandpiper [856]	Critically Endangered	Species or species habitat may occur within area	In feature area

Scientific Name	Threatened Category	Presence Text	Buffer Status
Calyptorhynchus banksii naso Forest Red-tailed Black-Cockatoo, Karrak [67034]	Vulnerable	Species or species habitat known to occur within area	In feature area
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat may occur within area	In buffer area only
Diomedea amsterdamensis Amsterdam Albatross [64405]	Endangered	Species or species habitat may occur within area	In buffer area only
Diomedea epomophora Southern Royal Albatross [89221]	Vulnerable	Species or species habitat may occur within area	In buffer area only
Diomedea exulans Wandering Albatross [89223]	Vulnerable	Species or species habitat likely to occur within area	In buffer area only
Leipoa ocellata Malleefowl [934]	Vulnerable	Species or species habitat likely to occur within area	In feature area
Macronectes giganteus Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Species or species habitat may occur within area	In buffer area only
Macronectes halli Northern Giant Petrel [1061]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area	In buffer area only
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat may occur within area	In feature area
Pachyptila turtur subantarctica Fairy Prion (southern) [64445]	Vulnerable	Species or species habitat likely to occur within area	In buffer area only
Rostratula australis Australian Painted Snipe [77037]	Endangered	Species or species habitat likely to occur within area	In feature area

Scientific Name	Threatened Category	Presence Text	Buffer Status
[Sternula nereis nereis](#)			
Australian Fairy Tern [82950]	Vulnerable	Species or species habitat known to occur within area	In buffer area only
[Thalassarche cauta](#)			
Shy Albatross [89224]	Endangered	Species or species habitat may occur within area	In buffer area only
[Thalassarche impavida](#)			
Campbell Albatross, Campbell Black-browed Albatross [64459]	Vulnerable	Species or species habitat may occur within area	In buffer area only
[Thalassarche melanophris](#)			
Black-browed Albatross [66472]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area	In buffer area only
[Thalassarche steadi](#)			
White-capped Albatross [64462]	Vulnerable	Species or species habitat may occur within area	In buffer area only
[Zanda baudinii listed as Calyptorhynchus baudinii](#)			
Baudin's Black-Cockatoo, Long-billed Black-cockatoo [87736]	Endangered	Roosting known to occur within area	In feature area
[Zanda latirostris listed as Calyptorhynchus latirostris](#)			
Carnaby's Black Cockatoo, Short-billed Black-cockatoo [87737]	Endangered	Breeding known to occur within area	In feature area
FISH			
[Thunnus maccoyii](#)			
Southern Bluefin Tuna [69402]	Conservation Dependent	Species or species habitat likely to occur within area	In buffer area only
MAMMAL			
[Bettongia penicillata ogilbyi](#)			
Woylie [66844]	Endangered	Species or species habitat may occur within area	In buffer area only
[Dasyurus geoffroii](#)			
Chuditch, Western Quoll [330]	Vulnerable	Species or species habitat known to occur within area	In feature area
[Neophoca cinerea](#)			
Australian Sea-lion, Australian Sea Lion [22]	Endangered	Species or species habitat known to occur within area	In buffer area only

Scientific Name	Threatened Category	Presence Text	Buffer Status
[Setonix brachyurus](#) Quokka [229]	Vulnerable	Species or species habitat likely to occur within area	In buffer area only
OTHER			
[Westralunio carteri](#) Carter's Freshwater Mussel, Freshwater Mussel [86266]	Vulnerable	Species or species habitat known to occur within area	In feature area
PLANT			
[Acacia anomala](#) Grass Wattle, Chittering Grass Wattle [8153]	Vulnerable	Species or species habitat likely to occur within area	In buffer area only
[Acacia aphylla](#) Leafless Rock Wattle [13553]	Vulnerable	Species or species habitat known to occur within area	In feature area
[Andersonia gracilis](#) Slender Andersonia [14470]	Endangered	Species or species habitat likely to occur within area	In feature area
[Anigozanthos viridis subsp. terraspectans](#) Dwarf Green Kangaroo Paw [3435]	Vulnerable	Species or species habitat may occur within area	In buffer area only
[Anthocercis gracilis](#) Slender Tailflower [11103]	Vulnerable	Species or species habitat known to occur within area	In buffer area only
[Caladenia huegelii](#) King Spider-orchid, Grand Spider-orchid, Rusty Spider-orchid [7309]	Endangered	Species or species habitat likely to occur within area	In buffer area only
[Calytrix breviseta subsp. breviseta](#) Swamp Starflower [23879]	Endangered	Species or species habitat may occur within area	In feature area
[Chamelaucium sp. Gingin (N.G.Marchant 6)](#) Gingin Wax [88881]	Endangered	Species or species habitat may occur within area	In buffer area only
[Conospermum undulatum](#) Wavy-leaved Smokebush [24435]	Vulnerable	Species or species habitat known to occur within area	In feature area

Scientific Name	Threatened Category	Presence Text	Buffer Status
Darwinia apiculata Scarp Darwinia [8763]	Endangered	Species or species habitat known to occur within area	In buffer area only
Diplolaena andrewsii [6601]	Endangered	Species or species habitat known to occur within area	In feature area
Diuris drummondii Tall Donkey Orchid [4365]	Vulnerable	Species or species habitat likely to occur within area	In feature area
Diuris micrantha Dwarf Bee-orchid [55082]	Vulnerable	Species or species habitat likely to occur within area	In feature area
Diuris purdiei Purdie's Donkey-orchid [12950]	Endangered	Species or species habitat likely to occur within area	In feature area
Drakaea elastica Glossy-leafed Hammer Orchid, Glossy-leaved Hammer Orchid, Warty Hammer Orchid [16753]	Endangered	Species or species habitat likely to occur within area	In feature area
Drakaea micrantha Dwarf Hammer-orchid [56755]	Vulnerable	Species or species habitat may occur within area	In feature area
Eleocharis keigheryi Keighery's Eleocharis [64893]	Vulnerable	Species or species habitat likely to occur within area	In feature area
Eremophila glabra subsp. chlorella [84927]	Endangered	Species or species habitat likely to occur within area	In buffer area only
Eucalyptus x balanites Cadda Road Mallee, Cadda Mallee [87816]	Endangered	Species or species habitat may occur within area	In feature area
Grevillea christineae Christine's Grevillea [64520]	Endangered	Species or species habitat likely to occur within area	In buffer area only

Scientific Name	Threatened Category	Presence Text	Buffer Status
Grevillea curviloba subsp. incurva Narrow curved-leaf Grevillea [64909]	Endangered	Species or species habitat may occur within area	In feature area
Grevillea flexuosa Zig Zag Grevillea [2957]	Vulnerable	Species or species habitat may occur within area	In buffer area only
Macarthuria keigheryi Keighery's Macarthuria [64930]	Endangered	Species or species habitat likely to occur within area	In feature area
Synaphea sp. Fairbridge Farm (D. Papenfus 696) Selena's Synaphea [82881]	Critically Endangered	Species or species habitat likely to occur within area	In feature area
Thelymitra dedmaniarum Cinnamon Sun Orchid [65105]	Endangered	Species or species habitat may occur within area	In feature area
Thelymitra stellata Star Sun-orchid [7060]	Endangered	Species or species habitat known to occur within area	In feature area
Trithuria occidentalis Swan Hydatella [42224]	Endangered	Species or species habitat likely to occur within area	In buffer area only
REPTILE			
Caretta caretta Loggerhead Turtle [1763]	Endangered	Species or species habitat known to occur within area	In buffer area only
Chelonia mydas Green Turtle [1765]	Vulnerable	Species or species habitat known to occur within area	In buffer area only
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Species or species habitat known to occur within area	In buffer area only
Natator depressus Flatback Turtle [59257]	Vulnerable	Species or species habitat known to occur within area	In buffer area only
SHARK

Commonwealth Lands [Resource Information]

The Commonwealth area listed below may indicate the presence of Commonwealth land in this vicinity. Due to the unreliability of the data source, all proposals should be checked as to whether it impacts on a Commonwealth area, before making a definitive decision. Contact the State or Territory government land department for further information.

Commonwealth Land Name	State	Buffer Status
Defence

1 PURPOSE

This report is designed to assist in identifying the location of matters of national environmental significance (MNES) and other matters protected by the Environment Protection and Biodiversity Conservation Act 1999 (Cth) (EPBC Act) which may be relevant in determining obligations and requirements under the EPBC Act.

The report contains the mapped locations of:

- World and National Heritage properties;
- Wetlands of International and National Importance;
- Commonwealth and State/Territory reserves;
- distribution of listed threatened, migratory and marine species;
- listed threatened ecological communities; and
- other information that may be useful as an indicator of potential habitat value.

2 DISCLAIMER

This report is not intended to be exhaustive and should only be relied upon as a general guide as mapped data is not available for all species or ecological communities listed under the EPBC Act (see below). Persons seeking to use the information contained in this report to inform the referral of a proposed action under the EPBC Act should consider the limitations noted below and whether additional information is required to determine the existence and location of MNES and other protected matters.

Where data are available to inform the mapping of protected species, the presence type (e.g. known, likely or may occur) that can be determined from the data is indicated in general terms. It is the responsibility of any person using or relying on the information in this report to ensure that it is suitable for the circumstances of any proposed use. The Commonwealth cannot accept responsibility for the consequences of any use of the report or any part thereof. To the maximum extent allowed under governing law, the Commonwealth will not be liable for any loss or damage that may be occasioned directly or indirectly through the use of, or reliance

3 DATA SOURCES

Threatened ecological communities

For threatened ecological communities where the distribution is well known, maps are generated based on information contained in recovery plans, State vegetation maps and remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Threatened, migratory and marine species

Threatened, migratory and marine species distributions have been discerned through a variety of methods. Where distributions are well known and if time permits, distributions are inferred from either thematic spatial data (i.e. vegetation, soils, geology, elevation, aspect, terrain, etc.) together with point locations and described habitat; or modelled (MAXENT or BIOCLIM habitat modelling) using

Where little information is available for a species or large number of maps are required in a short time-frame, maps are derived either from 0.04 or 0.02 decimal degree cells; by an automated process using polygon capture techniques (static two kilometre grid cells, alpha-hull and convex hull); or captured manually or by using topographic features (national park boundaries, islands, etc.).

In the early stages of the distribution mapping process (1999-early 2000s) distributions were defined by degree blocks, 100K or 250K map sheets to rapidly create distribution maps. More detailed distribution mapping methods are used to update these distributions

4 LIMITATIONS

The following species and ecological communities have not been mapped and do not appear in this report:

- threatened species listed as extinct or considered vagrants;
- some recently listed species and ecological communities;
- some listed migratory and listed marine species, which are not listed as threatened species; and
- migratory species that are very widespread, vagrant, or only occur in Australia in small numbers.

The following groups have been mapped, but may not cover the complete distribution of the species:

- listed migratory and/or listed marine seabirds, which are not listed as threatened, have only been mapped for recorded
- seals which have only been mapped for breeding sites near the Australian continent

The breeding sites may be important for the protection of the Commonwealth Marine environment.

Refer to the metadata for the feature group (using the Resource Information link) for the currency of the information.

APPENDIX 4

Conservation Codes

Conservation Codes for Western Australian Flora and Fauna

Specially protected fauna or flora are species* which have been adequately searched for and are deemed to be, in the wild, either rare, at risk of extinction, or otherwise in need of special protection, and have been gazetted as such. Conservation codes have been transitioned under regulations 170, 171 and 172 of the *Biodiversity Conservation Regulations 2018.*

T Threatened species – Schedules 1-4

Listed by order of the Minister as Threatened in the category of critically endangered, endangered or vulnerable under section 19(1), or is a rediscovered species to be regarded as threatened species under section 26(2) of the *Biodiversity Conservation Act 2016* (BC Act).

- **Threatened fauna** is that subset of 'Specially Protected Fauna' listed under schedules 1 to 3 of the *Wildlife Conservation (Specially Protected Fauna) Notice 2018* for Threatened Fauna.
- **Threatened flora** is that subset of 'Rare Flora' listed under schedules 1 to 3 of the *Wildlife Conservation (Rare Flora) Notice 2018* for Threatened Flora.

The assessment of the conservation status of these species is based on their national extent and ranked according to their level of threat using IUCN Red List categories and criteria as detailed below.

CR Critically endangered species

Threatened species considered to be "*facing an extremely high risk of extinction in the wild in the immediate future, as determined in accordance with criteria set out in the ministerial guidelines*".

Listed as critically endangered under section 19(1)(a) of the BC Act in accordance with the criteria set out in section 20 and the ministerial guidelines. Published under schedule 1 of the *Wildlife Conservation (Specially Protected Fauna) Notice 2018* for critically endangered fauna or the *Wildlife Conservation (Rare Flora) Notice 2018* for critically endangered flora.

EN Endangered species

Threatened species considered to be "*facing a very high risk of extinction in the wild in the near future, as determined in accordance with criteria set out in the ministerial guidelines*".

Listed as endangered under section 19(1)(b) of the BC Act in accordance with the criteria set out in section 21 and the ministerial guidelines. Published under schedule 2 of the *Wildlife Conservation (Specially Protected Fauna) Notice 2018* for endangered fauna or the *Wildlife Conservation (Rare Flora) Notice 2018* for endangered flora.

VU Vulnerable species

Threatened species considered to be "*facing a high risk of extinction in the wild in the medium-term future, as determined in accordance with criteria set out in the ministerial guidelines*".

Listed as vulnerable under section 19(1)(c) of the BC Act in accordance with the criteria set out in section 22 and the ministerial guidelines. Published under schedule 3 of the *Wildlife*

Conservation (Specially Protected Fauna) Notice 2018 for vulnerable fauna or the *Wildlife Conservation (Rare Flora) Notice 2018* for vulnerable flora.

EX Presumed extinct species

Species where "*there is no reasonable doubt that the last member of the species has died*", and listing is otherwise in accordance with the ministerial guidelines (section 24 of the BC Act).

Published as presumed extinct under schedule 4 of the *Wildlife Conservation (Specially Protected Fauna) Notice 2018* for extinct fauna or the *Wildlife Conservation (Rare Flora) Notice 2018* for extinct flora.

EW Extinct in the wild species

Species that "*is known only to survive in cultivation, in captivity or as a naturalised population well outside its past range; and it has not been recorded in its known habitat or expected habitat, at appropriate seasons, anywhere in its past range, despite surveys over a time frame appropriate to its life cycle and form*", and listing is otherwise in accordance with the ministerial guidelines (section 25 of the BC Act).

Currently there are no threatened fauna or threatened flora species listed as extinct in the wild. If listing of a species as extinct in the wild occurs, then a schedule will be added to the applicable notice.

Specially protected species

Listed by order of the Minister as specially protected under section 13(1) of the BC Act. Meeting one or more of the following categories: species of special conservation interest; migratory species; cetaceans; species subject to international agreement; or species otherwise in need of special protection.

Species that are listed as threatened species (critically endangered, endangered or vulnerable) or extinct species under the BC Act cannot also be listed as Specially Protected species.

MI Migratory species

Fauna that periodically or occasionally visit Australia or an external Territory or the exclusive economic zone; or the species is subject of an international agreement that relates to the protection of migratory species and that binds the Commonwealth; and listing is otherwise in accordance with the ministerial guidelines (section 15 of the BC Act).

Includes birds that are subject to an agreement between the government of Australia and the governments of Japan (JAMBA), China (CAMBA) and The Republic of Korea (ROKAMBA), and fauna subject to the Convention on the Conservation of Migratory Species of Wild Animals (Bonn Convention), an environmental treaty under the United Nations Environment Program. Migratory species listed under the BC Act are a subset of the migratory animals, that are known to visit Western Australia, protected under the international agreements or treaties, excluding species that are listed as Threatened species.

Published as migratory birds protected under an international agreement under schedule 5 of the *Wildlife Conservation (Specially Protected Fauna) Notice 2018.*

CD Species of special conservation interest (conservation dependent fauna)

Fauna of special conservation need being species dependent on ongoing conservation intervention to prevent it becoming eligible for listing as threatened, and listing is otherwise in accordance with the ministerial guidelines (section 14 of the BC Act).

Published as conservation dependent fauna under schedule 6 of the *Wildlife Conservation (Specially Protected Fauna) Notice 2018*.

OS Other specially protected species

Fauna otherwise in need of special protection to ensure their conservation, and listing is otherwise in accordance with the ministerial guidelines (section 18 of the BC Act).

Published as other specially protected fauna under schedule 7 of the *Wildlife Conservation (Specially Protected Fauna) Notice 2018*.

P Priority species

Possibly threatened species that do not meet survey criteria, or are otherwise data deficient, are added to the Priority Fauna or Priority Flora Lists under Priorities 1, 2 or 3. These three categories are ranked in order of priority for survey and evaluation of conservation status so that consideration can be given to their declaration as threatened fauna or flora.

Species that are adequately known, are rare but not threatened, or meet criteria for near threatened, or that have been recently removed from the threatened species or other specially protected fauna lists for other than taxonomic reasons, are placed in Priority 4. These species require regular monitoring.

Assessment of Priority codes is based on the Western Australian distribution of the species, unless the distribution in WA is part of a contiguous population extending into adjacent States, as defined by the known spread of locations.

Priority 1: Poorly-known species

Species that are known from one or a few locations (generally five or less) which are potentially at risk. All occurrences are either: very small; or on lands not managed for conservation, e.g. agricultural or pastoral lands, urban areas, road and rail reserves, gravel reserves and active mineral leases; or otherwise under threat of habitat destruction or degradation. Species may be included if they are comparatively well known from one or more locations but do not meet adequacy of survey requirements and appear to be under immediate threat from known threatening processes. Such species are in urgent need of further survey.

Priority 2: Poorly-known species

Species that are known from one or a few locations (generally five or less), some of which are on lands managed primarily for nature conservation, e.g. national parks, conservation parks, nature reserves and other lands with secure tenure being managed for conservation. Species may be included if they are comparatively well known from one or more locations but do not meet adequacy of survey requirements and appear to be under threat from known threatening processes. Such species are in urgent need of further survey.

Priority 3: Poorly-known species

Species that are known from several locations, and the species does not appear to be under imminent threat, or from few but widespread locations with either large population size or significant remaining areas of apparently suitable habitat, much of it not under imminent threat. Species may be included if they are comparatively well known from several locations but do not meet adequacy of survey requirements and known threatening processes exist that could affect them. Such species are in need of further survey.

Priority 4: Rare, Near Threatened and other species in need of monitoring

(a) Rare. Species that are considered to have been adequately surveyed, or for which sufficient knowledge is available, and that are considered not currently threatened or in need of special protection but could be if present circumstances change. These species are usually represented on conservation lands.

(b) Near Threatened. Species that are considered to have been adequately surveyed and that are close to qualifying for vulnerable but are not listed as Conservation Dependent.

(c) Species that have been removed from the list of threatened species during the past five years for reasons other than taxonomy.

*Species includes all taxa (plural of taxon - a classificatory group of any taxonomic rank, e.g. a family, genus, species or any infraspecific category i.e. subspecies or variety, or a distinct population).

Western Australian Ecological Communities

Threatened Ecological Communities

The BC Act provides for the statutory listing of threatened ecological communities (TECs) by the Minister.

Presumed Totally Destroyed (PD)

An ecological community that has been adequately searched for but for which no representative occurrences have been located. The community has been found to be totally destroyed or so extensively modified throughout its range that no occurrence of it is likely to recover its species composition and/or structure in the foreseeable future.

Critically Endangered (CR)

An ecological community that has been adequately surveyed and found to have been subject to a major contraction in area and/or that was originally of limited distribution and is facing severe modification or destruction throughout its range in the immediate future, or is already severely degraded throughout its range but capable of being substantially restored or rehabilitated.

Endangered (EN)

An ecological community that has been adequately surveyed and found to have been subject to a major contraction in area and/or was originally of limited distribution and is in danger of significant modification throughout its range or severe modification or destruction over most of its range in the near future.

Vulnerable (VU)

An ecological community that has been adequately surveyed and is found to be declining and/or has declined in distribution and/or condition and whose ultimate security has not yet been assured and/or a community that is still widespread but is believed likely to move into a category of higher threat in the near future if threatening processes continue or begin operating throughout its range.

Priority Ecological Communities

Possible threatened ecological communities that do not meet survey criteria or that are not adequately defined are added to the Priority Ecological Community List under priorities 1, 2 and 3. These three categories are ranked in order of priority for survey and/or definition of the community. Ecological communities that are adequately known, and are rare but not threatened or meet criteria for Near Threatened, or that have been recently removed from the threatened list, are placed in Priority 4. These ecological communities require regular monitoring. Conservation Dependent ecological communities are placed in Priority 5.

Priority One: Poorly-known ecological communities

Ecological communities that are known from very few occurrences with a very restricted distribution (generally ≤5 occurrences or a total area of ≤ 100ha).

Occurrences are believed to be under threat either due to limited extent, or being on lands under immediate threat (e.g. within agricultural or pastoral lands, urban areas, active mineral leases) or for which current threats exist. May include communities with occurrences on protected lands. Communities may be included if they are comparatively well-known from one or more localities but do not meet adequacy of survey requirements, and/or are not well defined, and appear to be under immediate threat from known threatening processes across their range.

Priority Two: Poorly-known ecological communities

Communities that are known from few occurrences with a restricted distribution (generally ≤10 occurrences or a total area of ≤200ha). At least some occurrences are not believed to be under immediate threat (within approximately 10 years) of destruction or degradation. Communities may be included if they are comparatively well known from one or more localities but do not meet adequacy of survey requirements, and/or are not well defined, and appear to be under threat from known threatening processes.

Priority Three: Poorly known ecological communities

(i) Communities that are known from several to many occurrences, a significant number or area of which are not under threat of habitat destruction or degradation or:

(ii) communities known from a few widespread occurrences, which are either large or with significant remaining areas of habitat in which other occurrences may occur, much of it not under imminent threat (within approximately 10 years), or;

(iii) munities made up of large, and/or widespread occurrences, that may or may not be represented in the reserve system, but are under threat of modification across much of their range from processes such as grazing by domestic and/or feral stock, inappropriate fire regimes, clearing, hydrological change etc.

Communities may be included if they are comparatively well known from several localities but do not meet adequacy of survey requirements and/or are not well defined, and known threatening processes exist that could affect them.

Priority Four: Ecological communities that are adequately known, rare but not threatened or meet criteria for Near Threatened, or that have been recently removed from the threatened list. These communities require regular monitoring.

(i) Rare. Ecological communities known from few occurrences that are considered to have been adequately surveyed, or for which sufficient knowledge is available, and that are considered not currently threatened or in need of special protection, but could be if present circumstances change. These communities are usually represented on conservation lands.

(ii) Near Threatened. Ecological communities that are considered to have been adequately surveyed and that do not qualify for Conservation Dependent, but that are close to qualifying for a higher threat category.

(iii) Ecological communities that have been removed from the list of threatened communities during the past five years.

Priority Five: Conservation Dependent ecological communities

Ecological communities that are not threatened but are subject to a specific conservation program, the cessation of which would result in the community becoming threatened within five years.

Commonwealth of Australia Conservation Codes

Threatened Flora and Fauna

Threatened fauna and flora may be listed under Section 178 of the *Environment Protection and Biodiversity Conservation Act 1999* (EPBC Act) in any one of the following six categories:

Extinct

A native species is eligible to be included in the extinct category at a particular time if, at that time, there is no reasonable doubt that the last member of the species has died.

Extinct in the wild

A native species is eligible to be included in the extinct in the wild category at a particular time if, at that time:

a) it is known only to survive in cultivation, in captivity or as a naturalised population well outside its past range; or
b) it has not been recorded in its known and/or expected habitat, at appropriate seasons, anywhere in its past range, despite exhaustive surveys over a time frame appropriate to its life cycle and form.

Critically endangered

A taxon is Critically Endangered when the best available evidence indicates that it meets any of the five criteria for the category identified in Part 7.01 of the EPBC Regulations, and it is therefore considered to be facing an extremely high risk of extinction in the wild.

Endangered

A taxon is Endangered when the best available evidence indicates that it meets any of the five criteria for the category identified in Part 7.01 of the EPBC Regulations, and it is therefore considered to be facing a very high risk of extinction in the wild.

Vulnerable

A taxon is Vulnerable when the best available evidence indicates that it meets any of the five criteria for the category identified in Part 7.01 of the EPBC Regulations, and it is therefore considered to be facing a high risk of extinction in the wild.

Conservation dependent

A native species is eligible to be included in the conservation dependent category at a particular time if, at that time:

a) the species is the focus of a specific conservation program the cessation of which would result in the species becoming vulnerable, endangered or critically endangered; or
b) the following subparagraphs are satisfied:
    i. the species is a species of fish;

ii. the species is the focus of a plan of management that provides for management actions necessary to stop the decline of, and support the recovery of, the species so that its chances of long term survival in nature are maximised;
iii. the plan of management is in force under a law of the Commonwealth or of a State or Territory;
iv. cessation of the plan of management would adversely affect the conservation status of the species.

The EPBC Act does not provide for listing in a data deficient category. Where sufficient data (evidence) is unavailable to allow assessment by the Threatened Species Scientific Committee against the criteria for listing, the species are found to be ineligible. A recommendation is made to the Minister to not include the species in any category under the EPBC Act. For reasons of transparency and to inform future research, the Threatened Species Scientific Committee publishes the names of those species found to be data deficient. As data deficient is not a listing category under the EPBC Act, this has no statutory implications and the species is not considered to be listed under the EPBC Act.

Threatened Ecological Communities

Threatened Ecological communities under the EPBC Act are listed in three categories.

Critically endangered

If, at that time, an ecological community is facing an extremely high risk of extinction in the wild in the immediate future (indicative timeframe being the next 10 years).

Endangered

If, at that time, an ecological community is not critically endangered but is facing a very high risk of extinction in the wild in the near future (indicative timeframe being the next 20 years).

Vulnerable

If, at that time, an ecological community is not critically endangered or endangered, but is facing a high risk of extinction in the wild in the medium–term future (indicative timeframe being the next 50 years).

APPENDIX 6

Flora Species List

SPECIES LIST – Helena Valley Rd MRS Amendment

MONOCOTYLEDONS

ANACARDIACEAE
Lyginia barbata

ARACEAE
**Zantedeschia aethiopica*

ASPARAGACEAE
Thysanotus patersonii

COLCHICACEAE
Burchardia congesta

CYPERACEAE
Alexgeorgea nitens
Lepidosperma tetraquetrum
Mesomelaena pseudostygia

DASYPOGONACEAE
Dasypogon bromeliifolius

HAEMODORACEAE
Conostylis juncea
Haemodorum laxum

HEMEROCALLIDACEAE
Chamaescilla corymbosa

IRIDACEAE
**Ferraria crispa*
**Freesia alba x leichtlinii*
**Gladiolus caryophyllaceus*
**Moraea flaccida*
Patersonia occidentalis
**Romulea rosea*
**Sparaxis bulbifera*

JUNCACEAE
Juncus pallidus

JUNCAGINACEAE
Triglochin striata

ORCHIDACEAE
Caladenia flava

POACEAE
**Avena fatua*
**Briza maxima*
**Bromus diandrus*
**Cenchrus clandestinus*
**Ehrharta calycina*
**Ehrharta longiflora*
**Eragrostis curvula*
**Lolium perenne*

XANTHORRHOEACEAE
Xanthorrhoea preissii

DICOTYLEDONS

ANACARDIACEAE
**Schinus terebinthifolius*

APIACEAE
Centella asiatica

APOCYNACEAE
**Gomphocarpus fruticosus*

ASTERACEAE
**Arctotheca calendula*
**Cotula turbinata*
**Hypochaeris glabra*
**Sonchus oleraceus*
**Urospermum picroides*
**Ursinia anthemoides*

CARYOPHYLLACEAE
**Cerastium glomeratum*

CASUARINACEAE
Allocasuarina fraseriana
Allocasuarina humilis
**Casuarina cunninghamiana*

DILLENIACEAE
Hibbertia hypericoides
Hibbertia subvaginata

DROSERACEAE
Drosera stolonifera

EUPHORBIACEAE
**Euphorbia peplus*
**Euphorbia terracina*

FABACEAE
Acacia pulchella
Daviesia divaricata
Daviesia nudiflora
**Dipogon lignosus*
Jacksonia floribunda
**Lotus subbiflorus*
**Lupinus cosentinii*

GERANIACEAE
**Erodium moschatum*
**Pelargonium capitatum*

LAMIACEAE
**Stachys arvensis*

LORANTHACEAE
Nuytsia floribunda

MELIACEAE
**Melia azedarach*

MYRTACEAE
Astartea affinis
Beaufortia squarrosa
Calytrix flavescens
Corymbia calophylla
**Corymbia citriodora*
**Corymbia maculata*
Eremaea pauciflora
**Eucalyptus camaldulensis*
Eucalyptus marginata
Eucalyptus rudis
Eucalyptus todtiana
Eucalyptus wandoo
**Leptospermum laevigatum*
Melaleuca lateritia
Melaleuca rhaphiophylla
Taxandria linearifolia

OROBANCHACEAE
**Parentucellia latifolia*

OXALIDACEAE
**Oxalis glabra*
**Oxalis pes-caprae*

PAPAVERACEAE
**Fumaria capreolata*

PHYTOLACCACEAE
**Phytolacca octandra*

POLYGONACEAE
Persicaria decipiens
**Rumex vesicaria*

PRIMULACEAE
**Lysimachia arvensis*

PROTEACEAE
Adenanthos cygnorum var. *cygnorum*
Banksia attenuata
Banksia ilicifolia
Banksia menziesii
Stirlingia latifolia

APPENDIX 7

Quadrat Data

QUADRAT HV1

50 407073 E 6468939 N

Vegetation: *Xanthorrhoea preissii* Open Low Heath over weeds
Condition: Completely Degraded
Soil Type: Black sand, moist
Landform: Flat
Date: 9.9.22
Recorded by: Paul van der Moezel

QUADRAT (10 x 10m)

SPECIES	HEIGHT (m)	COVER (%)
Xanthorrhoea preissi	1-1.5	20
Beaufortia squarrosa	1.1	3
**Avena fatua*	0.8	1
**Ehrharta calycina*	0.6	30
**Lupinus cosentinii*	0.5	2
**Lolium rigidum*	0.4	40
**Euphorbia terracina*	0.3	2
**Briza maxima*	0.3	2
**Sonchus oleraceus*	0.1	<1
**Cotula turbinata*	<0.1	<1
**Erodium moschatum*	<0.1	<1
**Hypochaeris glabra*	Flat	50
**Arctotheca calendula*	Flat	1

* introduced species

QUADRAT HV2

50 407104 E 6468889 N

Vegetation: *Banksia menziesii/*Leptospermum laevigatum* Low Open Woodland
Condition: Degraded
Soil Type: Dark grey sand
Landform: Flat
Date: 9.9.22
Recorded by: Paul van der Moezel

QUADRAT (10 x 10m)

SPECIES	HEIGHT (m)	COVER (%)
Banksia menziesii	4	40
Allocasuarina fraseriana	4	5
**Leptospermum laevigatum*	3	10
Adenanthos cygnorum	3	1
Xanthorrhoea preissii	1	1
Jacksonia floribunda	0.9	<1
**Ehrharta calycina*	0.6	10
**Eragrostis curvula*	0.6	1
**Ehrharta longiflora*	0.4	10
**Lolium perenne*	0.4	5
**Bromus diandrus*	0.3	<1
**Euphorbia terracina*	0.2	<1
**Oxalis pes-caprae*	0.1	1
**Euphorbia peplus*	0.1	1
**Parentucellia latifolia*	0.1	<1
**Sonchus oleraceus*	0.1	<1
**Lotus subbiflorus*	<0.1	1
**Hypochaeris glabra*	Flat	1

* introduced species

QUADRAT HV3

50 407250 E 6468748 N

Vegetation: **Leptospermum laevigatum* Tall Open Scrub
Condition: Completely Degraded
Soil Type: Black sand
Landform: Flat
Date: 9.9.22
Recorded by: Paul van der Moezel

QUADRAT (10 x 10m)

SPECIES	HEIGHT (m)	COVER (%)
**Leptospermum laevigatum*	5	60
Eucalyptus todtiana	4	2
Xanthorrhoea preissii	0.8	1
**Ehrharta calycina*	0.5	1
**Fumaria capreolata*	0.4	40
**Ehrharta longiflora*	0.4	5
**Oxalis pes-caprae*	0.3	40

* introduced species

QUADRAT HV4

50 407418 E 6468133 N

Vegetation: *Eucalyptus rudis* Woodland over *Melaleuca rhaphiophylla* Low Open Woodland over weeds
Condition: Completely Degraded
Soil Type: Black loamy sand, moist
Landform: River floodplain
Date: 9.9.22
Recorded by: Paul van der Moezel

QUADRAT (10 x 10m)

SPECIES	HEIGHT (m)	COVER (%)
Eucalyptus rudis	25	25
Melaleuca rhaphiophylla	4	2
**Zantedeschia aethiopica*	1	20
**Cenchrus clandestinus*	0.3	80
**Romulea rosea*	0.3	10
Triglochin striata	0.3	5
**Ehrharta longifolia*	0.3	5
**Sonchus oleraceus*	0.1	<1
**Lotus subbiflorus*	<0.1	<1
**Rumex pulcher*	Flat	<1

* introduced species

QUADRAT HV5

50 407439 E 6469058 N

Vegetation: *Eucalyptus rudis* Woodland over *Melaleuca rhaphiophylla* Low Open Woodland over *Astartea affinis* Open Shrubland
Condition: Very Good
Soil Type: Dark brown-black loamy sand
Landform: Gentle slope
Date: 9.9.22
Recorded by: Paul van der Moezel

QUADRAT (10 x 10m)

SPECIES	HEIGHT (m)	COVER (%)
Eucalyptus rudis	28	40
Melaleuca rhaphiophylla	6	5
Taxandria linearifolia	2	2
Astartea affinis	1.5	5
Lepidosperma tetraquetrum	1.2	5
**Schinus terebinthifolius*	1.1	<1
**Zantedeschia aethiopica*	0.4	<1
Centella asiatica	<0.1	<1

* introduced species

QUADRAT HV6

50 407465 E 6469025 N

Vegetation: *Melaleuca rhaphiophylla* Low Open Forest over weeds
Condition: Degraded
Soil Type: Dark brown-black loamy sand, partially inundated
Landform: Flat
Date: 9.9.22
Recorded by: Paul van der Moezel

QUADRAT (10 x 10m)

SPECIES	HEIGHT (m)	COVER (%)
Melaleuca rhaphiophylla	8	60
**Schinus terebinthifolius*	4	5
Melaleuca lateritia	0.9	<1
Juncus pallidus	0.6	<1
**Moraea flaccida*	0.5	<1
**Phytolacca octandra*	0.4	<1
**Fumaria capreolata*	0.3	<1
**Ehrharta longiflora*	0.2	50
**Urospermum picroides*	0.1	<1
**Lysimachia arvensis*	0.1	<1
**Lotus subbiflorus*	<0.1	5
Centella asiatica	<0.1	5
Persicaria decipiens	<0.1	1

* introduced species

QUADRAT HV7

50 407546 E 6469026 N

Vegetation: *Eucalyptus wandoo* Woodland over weeds
Condition: Completely Degraded
Soil Type: Dark brown-black sandy loam
Landform: Slight rise
Date: 9.9.22
Recorded by: Paul van der Moezel

QUADRAT (10 x 10m)

SPECIES	HEIGHT (m)	COVER (%)
Eucalyptus wandoo	28	25
**Moraea flaccida*	0.5	<1
**Ehrharta longiflora*	0.3	50
**Romulea rosea*	0.3	10
**Bromus diandrus*	0.3	10
**Lolium perenne*	0.3	5
**Arctotheca calendula*	0.2	1
**Parentucellia latifolia*	0.1	1
**Fumaria capreolata*	0.1	<1
**Sonchus oleraceus*	<0.1	<1
**Lotus subbiflorus*	<0.1	<1
**Hypochaeris glabra*	Flat	<1

* introduced species

QUADRAT HV8

50 407535 E 6469100 N

Vegetation: *Eucalyptus rudis* Woodland over weeds
Condition: Completely Degraded
Soil Type: Dark black-brown loamy sand, floodplain
Landform: Flat
Date: 9.9.22
Recorded by: Paul van der Moezel

QUADRAT (10 x 10m)

SPECIES	HEIGHT (m)	COVER (%)
Eucalyptus rudis	28	25
**Gomphocarpus fruticosus*	1.1	<1
**Moraea flaccida*	0.5	2

Disclaimer

The *Aboriginal Heritage Act 1972* preserves all Aboriginal sites in Western Australia whether or not they are registered. Aboriginal sites exist that are not recorded on the Register of Aboriginal Sites, and some registered sites may no longer exist.

The information provided is made available in good faith and is predominately based on the information provided to the Department of Planning, Lands and Heritage by third parties. The information is provided solely on the basis that readers will be responsible for making their own assessment as to the accuracy of the information. If you find any errors or omissions in our records, including our maps, it would be appreciated if you email the details to the Department at AboriginalHeritage@dplh.wa.gov.au and we will make every effort to rectify it as soon as possible.

South West Settlement ILUA Disclaimer

Your heritage enquiry is on land **within or adjacent to** the following Indigenous Land Use Agreement(s): Whadjuk People Indigenous Land Use Agreement.

On 8 June 2015, six identical Indigenous Land Use Agreements (ILUAs) were executed across the South West by the Western Australian Government and, respectively, the Yued, Whadjuk People, Gnaala Karla Booja, Ballardong People, South West Boojarah #2 and Wagyl Kaip & Southern Noongar groups, and the South West Aboriginal Land and Sea Council (SWALSC).

The ILUAs bind the parties (including 'the State', which encompasses all State Government Departments and certain State Government agencies) to enter into a Noongar Standard Heritage Agreement (NSHA) when conducting Aboriginal Heritage Surveys in the ILUA areas, unless they have an existing heritage agreement. It is also intended that other State agencies and instrumentalities enter into the NSHA when conducting Aboriginal Heritage Surveys in the ILUA areas. It is recommended a NSHA is entered into, and an 'Activity Notice' issued under the NSHA, if there is a risk that an activity will 'impact' (i.e. by excavating, damaging, destroying or altering in any way) an Aboriginal heritage site. The Aboriginal Heritage Due Diligence Guidelines, which are referenced by the NSHA, provide guidance on how to assess the potential risk to Aboriginal heritage.

Likewise, from 8 June 2015 the Department of Mines, Industry Regulation and Safety (DMIRS) in granting Mineral, Petroleum and related Access Authority tenures within the South West Settlement ILUA areas, will place a condition on these tenures requiring a heritage agreement or a NSHA before any rights can be exercised.

If you are a State Government Department, Agency or Instrumentality, or have a heritage condition placed on your mineral or petroleum title by DMIRS, you should seek advice as to the requirement to use the NSHA for your proposed activity. The full ILUA documents, maps of the ILUA areas and the NSHA template can be found at https://www.wa.gov.au/organisation/department-of-the-premier-and-cabinet/south-west-native-title-settlement.

Further advice can also be sought from the Department of Planning, Lands and Heritage at AboriginalHeritage@dplh.wa.gov.au.

Coordinate Accuracy

Coordinates (Easting/Northing metres) are based on the GDA 94 Datum. Accuracy is shown as a code in brackets following the coordinates.

Terminology (NB that some terminology has varied over the life of the legislation)

Place ID/Site ID: This a unique ID assigned by the Department of Planning, Lands and Heritage to the place.

Status:

- **Registered Site**: The place has been assessed as meeting Section 5 of the *Aboriginal Heritage Act 1972.*
- **Other Heritage Place which includes:**
  - **Stored Data / Not a Site:** The place has been assessed as not meeting Section 5 of the *Aboriginal Heritage Act 1972.*
  - **Lodged:** Information has been received in relation to the place, but an assessment has not been completed at this *stage* to determine if it meets Section 5 of the *Aboriginal Heritage Act 1972.*

Access and Restrictions:

- **File Restricted = No:** Availability of information that the Department of Planning, Lands and Heritage holds in relation to the place is not restricted in any way.
- **File Restricted = Yes:** Some of the information that the Department of Planning, Lands and Heritage holds in relation to the place is restricted if it is considered culturally sensitive. This information will only be made available if the Department of Planning, Lands and Heritage receives written approval from the informants who provided the information. To request access please contact AboriginalHeritage@dplh.wa.gov.au.
- **Boundary Restricted = No:** Place location is shown as accurately as the information lodged with the Registrar allows.
- **Boundary Restricted = Yes:** To preserve confidentiality the exact location and extent of the place is not displayed on the map. However, the shaded region (generally with an area of at least 4km²) provides a general indication of where the place is located. If you are a landowner and wish to find out more about the exact location of the place, please contact the Department of Planning, Lands and Heritage.
- **Restrictions:**
  - **No Restrictions:** *Anyone* can view the information.
  - **Male Access Only:** Only *males* can view restricted information.
  - **Female Access Only:** *Only* females can view restricted information.

Legacy ID: This is the former unique number that the former Department of Aboriginal Sites assigned to the place. This has been replaced by the Place ID / Site ID.

1 INTRODUCTION

1.1 Background

Lots 5, 250, 253 and 254 Helena Valley Road (the site) is located in the Shire of Mundaring, approximately 15km east-north-east of the Perth Central Business District (Figure 1). The site is 18.658ha (Figure 2) and straddles both sides of Helena Valley Road.

The site is proposed to be rezoned from 'Rural' to 'Urban' under the Metropolitan Region Scheme (MRS) to facilitate an urban residential and commercial development.

This Flora, Vegetation and Fauna Survey has been commissioned by Dodd and Dodd Pty Ltd to assess the environmental values of the proposed MRS Amendment area.

1.2 Scope of Works

1.2.1 Flora and Vegetation Survey

A Detailed Flora and Vegetation Survey was undertaken in accordance with the *EPA Technical Guidance: Flora and Vegetation Surveys* (EPA, 2016). The survey included the following:

- Desktop search and review of the Department of Biodiversity, Conservation and Attractions (DBCA) Threatened and Priority flora database;
- A search of Atlas of Living Australia for records pf Threatened or Priority species;
- A search of the Commonwealth Government's Protected Matters Search Tool to identify species potentially occurring within the area that are protected under the *Environment Protection and Biodiversity Conservation Act 1999* (EPBC Act);
- Examination of historic and recent aerial photography and contour and soil maps to provisionally identify vegetation types and condition;
- Field survey using quadrats to record native and introduced species as well as a thorough site walkover of any areas of native vegetation;
- Recording of any significant plant species using a hand-held GPS;
- Description and mapping of vegetation types and vegetation condition; and
- Compilation of a flora list.

1.2.2 Fauna Survey

A Basic Fauna Survey was undertaken in accordance with EPA Technical Guidance *Fauna Surveys for Environmental Impact Assessment* (EPA, 2020). The survey included the following:

- A search of the DBCA Databases for the general area for Threatened and Priority Species;
- A search of the Atlas of Living Australia for Threatened and Priority Species;
- A search of the Commonwealth Government's Protected Matters Search Tool to identify species potentially occurring within the area that are protected under the EPBC Act or international migratory bird agreements (JAMBA/CAMBA);
- A review of studies previously undertaken in the vicinity of the site;
- A description of the fauna habitats present on the site from field surveys; and

- An assessment of the significance of the site for conservation significant species in a local and regional context.

As a component of the fauna survey a Black Cockatoo Habitat Assessment was undertaken to:

- Describe the Black Cockatoo habitat on the site;
- Determine the impact of potential development on Black Cockatoos if the site was to be cleared; and
- Assess the clearing in the context of the significance of the impact on Black Cockatoos.

2 EXISTING ENVIRONMENT

2.1 Land Use

Historical aerial photography shows that the site was largely cleared in 1953 (the oldest historical aerial photography available) (Plate 1). The original alignment of Helena Valley Road passed along the western boundary of what is now Lots 250 and 253.

Plate 1: Aerial Photograph from 1953 (Landgate, 2022)

Development on the site commenced between 1965 and 1970 (Plate 2) and some additional clearing has occurred.

Plate 2: Aerial Photograph from 1970 (Landgate, 2022)

The current alignment of Helena Valley Road was constructed between 1983 and 1985. Vegetation in the old road reserve has started to regrow in the 2000 aerial photograph (Plate 3). Vegetation has also started to grow more densely in the creekline in the north-east portion of the site (Kadina Brook).

Plate 3: Aerial Photograph from 2000 (Landgate, 2022)

The aerial photograph from 2022 shows the vegetation in the creekline has filled out substantially (Plate 4).

Plate 4: Aerial Photograph from 2017 (Landgate, 2022)

2.2 Topography

The majority of the site is gently undulating with an elevation of approximately 16 to 20m Australian Height Datum (AHD), generally sloping down to the north-west. Kadina Brook and its floodplain are located in an incised valley approximately 4m below the land to the south (Figure 2).

2.3 Geology and Soils

2.3.1 Geology

The site is located on the Pinjarra System, consisting of a poorly drained area of the Swan Coastal Plain with variable alluvial and aeolian soils (DPIRD, 2022). The Pinjarra Plain which is fluviatile in origin extends from the eastern side of the Bassendean Dunes to the western edge of the Darling Scarp, which joins the Ridge Hill Shelf and forms the denuded slope of the Darling Fault (Beard 1990).

2.3.2 Soils

The soil units located on the site is described as

- Pinjarra, Phase Gf7 (213Pj_Gf7) which is located on minor rises with deep, rapidly drained brownish, siliceous or bleached sands underlain by mottled yellow clay; and
- Pinjarra, Phase Gf9 (213Pj_Gf9) which is located on minor sandy rises (aeolian deposits) with moderately deep well drained sands overlying gravelly mottled clay (DPIRD, 2022).

2.4 Hydrology

Maximum groundwater is at approximately 8m to 10m AHD which is approximately 5m below ground level in Kadina Brook and 11 to 13m below the surface level in the remainder of the site. Groundwater generally flows to the north (DWER, 2022).

Kadina Brook runs through the north-eastern part of the site. Kadina Brook merges with the Helena River a short distance to the north-west west of the Roe Highway.

The site also contains a man-made dam on the southern side of Kadina Brook.

3 FLORA AND VEGETATION

3.1 Methodology

3.1.1 Database Searches

Searches of the following databases were undertaken prior to the site survey:

- DBCA Threatened and Priority Flora Databases including the WA Herbarium database (WAHerb) and Threatened (Declared Rare) and Priority Flora Species List (TFPL) (Appendix 1) for a radius of 10 km that provides a list of Threatened and Priority species recorded in the area;
- Atlas of Living Australia (ALA, 2022) (Appendix 2) which shows all species that have been recorded within a 10km radius of the site.
- The EPBC Act Protected Matters Search Tool (DCCEEW, 2022) (Appendix 3) which identifies species that are listed as Endangered, Threatened or Priority under the *Environment Protection and Biodiversity Conservation Act 1999* (EPBC Act) could potentially have habitat within a 5km radius of the site.

3.1.2 Detailed Survey

The Detailed Flora and Vegetation Survey was undertaken on 9 September 2022.

The survey included sampling from eight 10m x 10m quadrats from within the different vegetation types as well as a thorough walk through the better condition native vegetation. The tracklog for the survey is shown on Plate 5.

Plate 5: Track Log

Information on flora composition and vegetation structure was recorded in the non-permanent quadrats.

Most plant species were identified in the field. Some specimens were photographed or taken for identification at the Perth Reference Herbarium or office using standard reference guides.

3.1.3 Survey Conditions

The conditions that the survey was undertaken in are presented in Table 1 in order to assess the adequacy of the survey. Rainfall for Perth (Measured at Perth Airport, Site Number 009021) was slightly below average in July being 124.2 mm compared to an average of 155.2 mm, above average for August in 2022 being 172.6 mm and September being 101.4 mm compared to mean values of 118.5 mm and 72.6 mm (BOM, 2022). The above average rainfall in August and September is not considered to be a constraint on the survey.

Table 1: Statement of Botanical Survey Conditions

Issue	Constraints (Y/N)*	Comment
Competency/experience of the consultant conducting the survey	No	Dr Paul van der Moezel has extensive botanical survey experience on the Swan Coastal Plain, including the Helena Valley/Bushmead area.
Proportion of the flora identified^	No	The timing of the survey in September was optimal to identify most flora species on the site including all potential Threatened and Priority Flora. No follow-up survey required.
Sources of information (historic/recent or new data)	No	The flora of the Swan Coastal Plain is well documented.
Proportion of the task achieved and further work that may need to be undertaken	No	No follow-up survey required as no Threatened Flora expected to occur in other seasons.
Timing/weather/season/cycle	No	The spring survey was optimal for most flora species. 2022 was a good year for ephemeral species.
Disturbances (Fire)	No	The site has not been recently burnt.
Intensity of survey (e.g. In retrospect was the intensity adequate)	No	The time spent on site, approximately 7 hours and relative ease of access made for a full coverage.
Completeness (e.g. was relevant area fully surveyed)	No	
Resources (e.g. degree of expertise available for plant identification)	No	Experienced botanist undertook most plant identifications on site.
Remoteness and/or access problems	No	Easily accessible site in the Perth Metropolitan Region.
Availability of contextual (e.g. bioregional) information for the study area.	No	WALGA statistics on remnant bushland

*Constraints have been rated as Significant, Moderate or No constraints

^Fungi and nonvascular flora (e.g. algae, mosses and liverworts) were not specifically surveyed for during the survey.

3.2 Desktop Studies

3.2.1 Flora Database Searches

The results from the database searches are shown in Table 2. There were 138 species identified in the database searches, 37 Threatened species and 101 Priority species. Table 2 also lists the likelihood that any of the conservation significant species identified in the database searches could occur on the site based on the soil types and vegetation condition.

Table 2: Identified Significant Flora Species and Likelihood of Occurring on the Site

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
Caladenia huegelii	King Spider-orchid, Grand Spider-orchid, Rusty Spider-orchid	Critically Endangered	Endangered	The Grand Spider-orchid prefers deep grey-white sand usually associated with the Bassendean sand-dune system, however, rare plants have been known to extend into the Spearwood system (in which calcareous yellow sands dominate) in some areas (DEC, 2009). This species generally does not survive in disturbed areas.	Unlikely – the site is located on the Pinjarra system which is not typical to the species
Calectasia cyanea	Blue Tinsel Lily	Critically Endangered	Critically Endangered	The Blue Tinsel Lily prefers white, grey or yellow sand or gravel. This species is restricted to Torndirrup National Park and Albany region of the South West Botanical Province (Barrett and Dixon, 2001).	No – this species does not occur on the Swan Coastal Plain
Calytrix breviseta subsp. *breviseta*	Swamp Starflower	Critically Endangered	Endangered	The Swamp Starflower occurs in sandy clay in swampy flats.	Highly Unlikely – this species does not occur on the Swan Coastal Plain
Drakaea elastica	Glossy-leafed Hammer Orchid	Critically Endangered	Endangered	The Glossy-leafed Hammer Orchid prefers low-lying situations adjoining winter-wet swamps and grows on bare patches of sand within otherwise dense vegetation in low-lying areas alongside winter-wet swamps, typically in banksia (*Banksia menziesii, B. attenuata* and *B. ilicifolia*) woodland or spearwood (*Kunzea glabrescens*) thicket vegetation (DEC, 2009).	Unlikely – the habitat is not typical to this species
Eucalyptus x balanites	Cadda Road Mallee	Critically Endangered	Endangered	The Cadda Road Mallee prefers sandy soils with lateritic gravel.	Highly Unlikely – there is no lateritic habitat

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
Grevillea thelemanniana	Spider Net Grevillea	Critically Endangered	Critically Endangered	Spider Net Grevillea occurs on sandy clay soil in flat seasonally wet damplands and limestone soils are associated with some of the sites (TSSC, 2018).	Unlikely – habitat not typical to the species
Hemiandra rutilans	Sargents Snakebush, Colourful Snakebush	Critically Endangered	Endangered	Sargents Snakebush grows in yellow/grey sand and was originally collected at Sand Springs, south-west of York, which is now extinct. The most recent confirmed location was south of Dowerin where it grew in low *Banksia prionotes* woodland with *Eremaea pauciflora*, *Nuytsia floribunda* and *Verticordia densiflora* (DEC, 2008).	Highly Unlikely – not suitable habitat
Ptilotus pyramidatus	Pyramid Mulla-mulla	Critically Endangered	Critically Endangered	The Pyramid Mulla-mulla in known from one location and occurs on seasonally inundated flat (floodplain) with *Melaleuca acutifolia, Verticordia plumosa* var. *brachyphylla*, *Hypocalymma angustifolium*, *Meeboldii cana, Chorizandra enodis*, rushes, sedges and species-rich native annual herbs and geophytes (DPaW, 2016a).	Highly Unlikely – not suitable habitat
Synaphea sp. Fairbridge Farm (D Papenfus 696)	Selena's Synaphea	Critically Endangered	Critically Endangered	Selena's Synaphea occurs in sandy soils with lateritic pebbles near winter-wet flats, in low woodland with weedy grasses.	Highly Unlikely – not lateritic habitat
Thelymitra dedmaniarum	Cinnamon Sun-orchid	Critically Endangered	Endangered	Cinnamon Sun-orchid is known from only two locations in the Gidgegannup area. It is confined to open wandoo woodland on red-brown sandy loam associated with dolerite and granite outcropping (DEC, 2012a).	Highly Unlikely – not suitable habitat

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
Trithuria occidentalis	Swan Hydatella	Critically Endangered	Endangered	Swan Hydatella grows partly submerged on the edge of shallow, winter-wet claypans in very open shrubland of Robin Redbreast Bush (*Melaleuca lateritica*) and numerous annual herbs.	Highly Unlikely – not suitable habitat
Austrostipa bronweniae		Endangered	Endangered	*Austrostipa bronwenae* is recorded from wetlands seasonally waterlogged muddy sand with *Gahnia trifida*, *Actinostrobus pyramidalis, Grevillea thelemanniana*, *Melaleuca viminea* subsp. *viminea* (Australian National Herbarium, 2009).	Unlikely – not typical habitat
Darwinia apiculata	Scarp Darwinia	Endangered	Endangered	The Scarp Darwinia grows in lateritic soils.	Highly Unlikely – not lateritic habitat
Diplolaena andrewsii	Native Wild Rose	Endangered	Endangered	The Native Wild Rose occurs on loam, clay in association with granite outcrops and hillsides.	Highly Unlikely – not suitable habitat
Diuris purdiei	Purdie's Donkey-orchid	Endangered	Endangered	Purdie's Donkey Orchid occurs in grey-black sand in moist winter-wet swamps with winter inundation in dense heath with scattered trees and amongst native sedges and dense heath with scattered emergent *Melaleuca preissiana*, *Eucalyptus calophylla*, *E. marginata* and *Nuytsia floribunda*.	Unlikely – not typical habitat
Drakaea micrantha	Dwarf Hammer-orchid	Endangered	Vulnerable	Dwarf Hammer-orchid usually occurs on cleared fire breaks or open sandy patches in Banksia, Jarrah and Sheoak woodlands or forest and often found under Spearwood thickets.	Highly Unlikely – not suitable habitat

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
Eremophila glabra subsp. *chlorella*		Endangered	Endangered	*Eremophila glabra* subsp. *chlorella* occurs in sandy clay in winter-wet depressions associated with *Casuarina obesa, Viminaria juncea, Melaleuca lateritia, M. acutifolia, M. rhaphiophylla, M. viminea, M. teretifolia, M. brevifolia, Chorizandra enodis, Eucalyptus wandoo, E. loxophleba, Acacia saligna, A. microbotrya, Banksia telmatiaea, B. nivea subsp. nivea, Regelia ciliata, Petrophile seminuda, Verticordia densiflora var. densiflora* and *Calothamnus hirsutus* (DPaW, 2016b).	Highly Unlikely – not suitable habitat
Grevillea christineae	Christine's Grevillea	Endangered	Endangered	Christine's Grevillea prefers clay loam, sandy clay, often moist.	Highly Unlikely – not suitable habitat
Grevillea curviloba subsp. *incurva*	Narrow curved-leaf Grevillea	Endangered	Endangered	Narrow curved-leaf Grevillea prefers sand, sandy loam in winter-wet heath.	Highly Unlikely – not suitable habitat
Lepidosperma rostratum	Beaked Lepidosperma	Endangered	Endangered	Beaked Lepidosperma is found in peaty sand, clay associated with *Banksia telmatiaea* and *Calothamnus hirsutus*.	Highly Unlikely – not suitable habitat
Macarthuria keigheryi	Keighery's Macarthuria	Endangered	Endangered	Keighery's Macarthuria prefers white or grey sand on low-lying winter-wet damp sands growing among heathland, Jarrah and Sheoak/Banksia woodland and Banksia/Eucalypt Woodland (DEC, 2008).	Unlikely – not typical habitat
Thelymitra stellata	Star Sun-orchid	Endangered	Endangered	The Star Sun-orchid grows in gravelly loam among low heath and scrub in Eucalyptus marginata (Jarrah) and E. wandoo (Wandoo) woodland, and in low heath on lateritic hill tops.	Highly Unlikely – not suitable habitat

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
Acacia anomala	Grass Wattle, Chittering Grass Wattle	Vulnerable	Vulnerable	The Grass Wattle prefers lateritic soils and slopes.	Highly Unlikely – not lateritic habitat
Acacia aphylla	Leafless Rock Wattle	Vulnerable	Vulnerable	Leafless Rock Wattle occurs in sand, loam, clay loam on granite outcrops, hills.	Highly Unlikely – not suitable habitat
Andersonia gracilis	Slender Andersonia	Vulnerable	Endangered	Slender Andersonia occurs in white/grey sand, sandy clay, gravelly loam in winter-wet areas, near swamps. Vegetation type is low open heath with shrubs over sedges (DEC, 2006).	Highly Unlikely – not suitable habitat
Anigozanthos viridis subsp. *terraspectans*	Dwarf Green Kangaroo Paw	Vulnerable	Vulnerable	The Dwarf Green Kangaroo Paw occurs on grey sand, clay loam in winter-wet depressions.	Highly Unlikely – this species occurs north of Gingin
Anthocercis gracilis	Slender Tailflower	Vulnerable	Vulnerable	Slender Tailflower occurs in sandy or loamy soils near granite outcrops.	Highly Unlikely – not suitable habitat
Banksia mimica	Summer Honeypot	Vulnerable	Endangered	Summer Honeypot prefers white or grey sand over laterite, sandy loam.	Highly Unlikely – not suitable habitat
Chamelaucium lullfitzii	Gingin Wax	Vulnerable	Endangered	Gingin wax grows in white/yellow sand supporting open low woodland.	Highly Unlikely – not suitable habitat
Conospermum undulatum	Wavy-leaved Smokebush	Vulnerable	Vulnerable	Wavy-leaved Smokebush occurs on sand and sandy clay soils, often over laterite, on flat or gently sloping sites between the Swan and Canning Rivers with a few records from slightly swampy habitat (DEC, 2009).	Possible
Darwinia meeboldii	Cranbrook Bell	Vulnerable	Vulnerable	The Cranbrook Bell occurs in peaty soils over quartzite on hill slopes.	No – this species occurs in the Great Southern

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
Diuris drummondii	Tall Donkey Orchid	Vulnerable	Vulnerable	The Tall Donkey Orchid grows in low-lying depressions, swamps, in areas that contain surface water well into summer (Brown et al., 2013).	Highly Unlikely – habitat is too degraded
Diuris micrantha	Dwarf Bee-orchid	Vulnerable	Vulnerable	The Dwarf Bee-orchid is usually found on brown loamy clay in winter-wet swamps, in shallow water.	Highly Unlikely – not suitable habitat
Eleocharis keigheryi	Keighery's Eleocharis	Vulnerable	Vulnerable	Keighery's Eleocharis occurs in clay, sandy loam and is emergent in freshwater: creeks, claypans with *Melaleuca glateritia* and herbs such as *Wurmbea*, *Tribonanthes* and *Leptocarpus* spp.	Unlikely – not typical habitat
Gastrolobium lehmannii	Cranbrook Pea	Vulnerable	Vulnerable	The Cranbrook Pea occurs in red clay, laterite on low hilltop of breakaway.	No – this species occurs in the Great Southern
Grevillea flexuosa	Zig Zag Grevillea	Vulnerable	Vulnerable	Zig Zag Grevillea occurs in red-brown sand with laterite and gravel, sand over granite on ridgetop plateaus and associated breakaways.	Highly Unlikely – not suitable habitat and doesn't occur on the Swan Coastal Plain
Leucopogon cryptanthus	Small-flowered Leucopogon	Presumed Extinct	Extinct	Small-flowered Leucopogon was recorded amongst Eucalypts on orange-brown clay (Tasmanian Herbarium, 1979).	Highly Unlikely – not suitable habitat
Bolboschoenus fluviatilis	River Bulrush	Priority 1		River Bulrush occurs on the margins of wetlands and rivers.	Possible
Boronia humifusa		Priority 1		*Boronia humifusa* grows in gravelly clay loam over laterite in Jarrah-marri open forest.	Highly Unlikely – not lateritic habit
Calandrinia sp. Bayswater (C. Andrews s.n. 11/1902)		Priority 1		*Calandrinia* sp. Bayswater is known from Bayswater	Highly Unlikely – this species was last recorded in 1902 from Bayswater

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
Drosera paleacea	Dwarf Sundew	Priority 1		Dwarf Sundew occurs in white sand, sandy clay.	Highly Unlikely – not suitable habitat and doesn't occur on the Swan Coastal Plain
Haloragis scoparia		Priority 1		*Haloragis scoparia* was recorded from an old lake bed that was winter wet in black calcareous clay over limestone (Western Australian Herbarium, 1994).	Highly Unlikely – not suitable habitat
Hydrocotyle striata		Priority 1		*Hydrocotyle striata* occurs in clay near springs.	Highly Unlikely – not suitable habitat
Lachnagrostis drummondiana		Priority 1		*Lachnagrostis drummondiana* is recorded from the Geraldton Hills.	Highly Unlikely – not within the species range habitat
Levenhookia preissii	Preiss's Stylewort	Priority 1		Preiss's Stylewort occurs in grey or black peaty sands in swamps.	Unlikely – not typical habitat
Senecio gilbertii		Priority 1		*Senecio gilbertii* grows in peaty sand near swamps on slopes.	Unlikely – not typical habitat
Thelymitra magnifica	Crystal Brook Star-orchid	Priority 1		The Crystal Brook Star-orchid occurs on stony ridges with granite outcrops (Brown et al., 2013)	Highly Unlikely – not suitable habitat
Thysanotus formosus		Priority 1		*Thysanotus formosus* occurs in clayey sand, sandy loam in situations often inundated in winter.	Highly Unlikely – not suitable habitat
Acacia benthamii		Priority 2		*Acacia benthamii* grows on sand, typically on limestone breakaways	Highly Unlikely – not suitable habitat
Andersonia longifolia		Priority 2		*Andersonia longifolia* occurs in sandy loam over sandstone, laterite gravel on breakaways, ridges.	Highly Unlikely – not lateritic habitat
Angianthus microcephalus		Priority 2		*Angianthus microcephalus* occurs in sandy or clayey soils on salt swamps and pans.	Highly Unlikely – not suitable habitat
Boronia ericifolia		Priority 2		*Boronia ericifolia* occurs in sandy loam, clay, laterite in low-lying spots.	Highly Unlikely – not lateritic habitat

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
Calectasia grandiflora	Blue Tinsel Lily	Priority 2		Blue Tinsel Lily occurs in white, grey or yellow sand, sandy clay, gravel, laterite and granite in swampy areas, rock outcrops, flats, slopes and ridges.	Highly Unlikely – not suitable habitat
Comesperma griffinii		Priority 2		*Comesperma griffinii* grows in yellow or grey sand on plains.	Unlikely – not typical habitat
Epitriche demissus		Priority 2		*Epitriche demissus* grows in sandy and clayey soils on saline depressions, lake edges.	Highly Unlikely – not suitable habitat
Johnsonia pubescens subsp. *cygnorum*		Priority 2		*Johnsonia pubescens* subsp. *cygnorum* occurs on grey-white-yellow sand often overlying clays in Jarrah/Banksia woodland (Keighery, 2001) on flats on seasonally-wet sites	Highly Unlikely – not suitable habitat
Lepyrodia curvescens		Priority 2		*Lepyrodia curvescens* occurs in sand, laterite in seasonally inundated swampland.	Highly Unlikely – not lateritic habitat
Leucopogon cymbiformis		Priority 2		*Leucopogon cymbiformis* grows in white/grey or yellow sand, lateritic gravelly soils on sandplains, wet flats, foothills.	Highly Unlikely – not lateritic habitat
Melaleuca viminalis		Priority 2		*Melaleuca viminalis* is recorded from stony riverbed in rapids with sandstone rocks overlying volcanics, in the creekline of sandstone gorges in sand among rocks, and around a pool below a waterfall (Craven, Lepschi and Cowley, 2010).	Highly Unlikely – not suitable habitat
Phyllangium palustre		Priority 2		*Phyllangium palustre* occurs in clay on winter-wet claypans, low-lying seasonal wetlands.	Highly Unlikely – not suitable habitat
Poranthera moorokatta		Priority 2		*Poranthera moorokatta* grows in white silica sand and has been recorded in Banksia woodland and in a shallow dampland (Barrett, 2012).	Highly Unlikely – not suitable habitat

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
Pterostylis frenchii	Tuart Rufous Greenhood	Priority 2		Tuart Rufous Greenhood grows in calcareous sand with limestone, laterite on flatlands and gentle slopes.	No – this species occurs in Harvey and Waroona
Ricinocarpos tuberculatus		Priority 2		*Ricinocarpos tuberculatus* grows in white/grey sand on coastal dunes.	No – this species occurs east of Beverley
Scaevola paludosa		Priority 2		*Scaevola paludosa* prefers sandy soils.	No – this species occurs east of Esperance
Schoenus loliaceus		Priority 2		*Schoenus loliaceus* occurs on sandy soils in winter-wet depressions.	Highly Unlikely – not suitable habitat
Stylidium falcatum	Slender Beaked Triggerplant	Priority 2		Slender Beaked Triggerplant occurs in sand, gravelly clay loam on plains, lateritic ridges.	No – this species occurs near Albany
Stylidium squamellosum	Maize Trigger Plant	Priority 2		Maize Trigger Plant grows in brown to red-brown clay loam on winter-wet habitats and depressions, open woodland, shrubland.	Highly Unlikely – not suitable habitat
Thelymitra variegata	Queen of Sheba	Priority 2		The Queen of Sheba orchid grows on sandy clay, sand and laterite. The orchid is found in banksia and Jarrah woodland (Brown *et al*., 2013)	Unlikely – not typical habitat
Thysanotus brachiatus		Priority 2		*Thysanotus brachiatus* grows in grey sand.	Unlikely – not typical habitat – generally occurs In Kulin and further east
Thysanotus sp. Badgingarra (E.A. Griffin 2511)		Priority 2		*Thysanotus* sp. Badgingarra grows in grey sand with lateritic gravel.	Highly Unlikely – not lateritic habitat
Acacia drummondii subsp. *affinis*		Priority 3		*Acacia drummondii* subsp. *affinis* grows in lateritic gravelly soils.	Highly Unlikely – not lateritic habitat
Acacia oncinophylla subsp. oncinophylla		Priority 3		*Acacia oncinophylla* subsp. *oncinophylla* occurs in granitic soils	Highly Unlikely – not granitic habitat

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
Allocasuarina grevilleoides		Priority 3		*Allocasuarina grevilleoides* grows in sand over laterite, gravel.	Highly Unlikely – not lateritic habitat
Alyogyne sp. Great Victoria Desert (D.J. Edinger 6212)		Priority 3		*Alyogyne* sp. Great Victoria Desert occurs in black soils in fresh water swamps.	Highly Unlikely – not suitable habitat
Amanita carneiphylla	Miller's Pink-Gilled Lepidella	Priority 3		Miller's Pink-Gilled Lepidella is a deeply rooting species and grows in sandy soil.	Unlikely – not typical habitat
Amanita kalamundae	Kalamunda Lepidella	Priority 3		Kalamunda Lepidella is found In deep litter under *Eucalyptus patens* and *Agonis eriofolia* (Amanitaceae Org, 2018).	Highly Unlikely – not suitable habitat
Angianthus drummondii		Priority 3		*Angianthus drummondii* grows in grey or brown clay soils, ironstone on seasonally wet flats.	Highly Unlikely – not suitable habitat
Asteridea gracilis		Priority 3		*Asteridea gracilis* prefers sand, clay, gravelly soils.	Highly Unlikely – not suitable habitat
Babingtonia urbana	Coastal Plain Babingtonia	Priority 3		Coastal Plain Babingtonia occurs in orange sand, brown loam, white sandy clay on low flats, winter-wet swamps.	Highly Unlikely – not suitable habitat
Beaufortia purpurea	Purple Beaufortia	Priority 3		Purple Beaufortia occurs in lateritic or granitic soils on rocky slopes.	Highly Unlikely – not suitable habitat
Byblis gigantea	Rainbow Plant	Priority 3		The Rainbow Plant occurs in sandy-peat swamps in seasonally wet areas.	Highly Unlikely – not suitable habitat
Carex tereticaulis		Priority 3		*Carex tereticaulis* prefers black peaty sand.	Highly Unlikely – not suitable habitat
Chamaescilla gibsonii		Priority 3		*Chamaescilla gibsonii* grows in clay to sandy clay on winter-wet flats, shallow water-filled claypans.	Highly Unlikely – not claypan habitat
Comesperma rhadinocarpum	Slender-fruited Comesperma	Priority 3		Slender-fruited Comesperma occurs in sandy soils.	Unlikely – not typical habitat

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
Conostylis bracteata		Priority 3		*Conostylis bracteata* occurs in sand, limestone on consolidated sand dunes.	Highly Unlikely – not suitable habitat
Cyathochaeta teretifolia		Priority 3		*Cyathochaeta teretifolia* occurs in grey sand, sandy clay on swamps, creek edges.	Highly Unlikely – not suitable habitat
Dampiera sericantha		Priority 3		*Dampiera sericantha* occurs in sand, sometimes with gravel on plains.	Highly Unlikely – not suitable habitat
Eryngium sp. *Subdecumbens* (G.J. Keighery 5390)		Priority 3		*Eryngium* sp. *Subdecumbens* grows in clay, grey sand on seasonally wet flats, claypans, swamps.	Highly Unlikely – not suitable habitat
Grevillea dissectifolia		Priority 3		*Grevillea dissectifolia* occurs in gravelly loam in moist areas and on roadsides.	Highly Unlikely – not suitable habitat
Haemodorum loratum		Priority 3		*Haemodorum loratum* prefers grey or yellow sand, gravel.	Highly Unlikely – not gravel habitat
Hakea longiflora		Priority 3		*Hakea longiflora* grows in white sand, loam, gravel, laterite on breakaways.	Highly Unlikely – not lateritic habitat
Halgania corymbosa		Priority 3		*Halgania corymbosa* prefers gravelly soils, soils over granite.	Highly Unlikely – not suitable habitat
Isopogon autumnalis		Priority 3		*Isopogon autumnalis* occurs in white, grey or yellow sand, often over laterite.	Highly Unlikely – not suitable habitat
Jacksonia gracillima		Priority 3		*Jacksonia gracillima* occurs in grey and brown well-drained sand.	Possible
Lasiopetalum glutinosum subsp. *glutinosum*		Priority 3		*Lasiopetalum glutinosum* subsp. *glutinosum* occurs in lateritic and granitic soils.	Highly Unlikely – not suitable habitat
Lepyrodia heleocharoides		Priority 3		*Lepyrodia heleocharoides* grows in moist peaty sand in dry or seasonally inundated heath or woodland, swamps.	Highly Unlikely – not suitable habitat

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
Meionectes tenuifolia		Priority 3		*Meionectes tenuifolia* occurs on swamp margins on seasonally wet poorly drained flats or granite flats in shallow soils.	Highly Unlikely – not suitable habitat
Myriophyllum echinatum		Priority 3		*Myriophyllum echinatum* grows in clay on winter-wet flats.	Highly Unlikely – not suitable habitat
Pithocarpa corymbulosa		Priority 3		*Pithocarpa corymbulosa* occurs in gravelly or sandy loam amongst granite outcrops.	Highly Unlikely – not suitable habitat
Platysace ramosissima		Priority 3		*Platysace ramosissima* prefers sandy soils.	Possible
Schoenus benthamii		Priority 3		*Schoenus benthamii* prefers white, grey sand, sandy clay in winter-wet flats, swamps.	Highly Unlikely – not suitable habitat
Schoenus capillifolius		Priority 3		*Schoenus capillifolius* grows in brown mud on claypans.	Highly Unlikely – not suitable habitat
Schoenus pennisetis		Priority 3		*Schoenus pennisetis* occurs in grey or peaty sand, sandy clay in swamps, winter-wet depressions.	Highly Unlikely – not suitable habitat
Sporobolus blakei		Priority 3		*Sporobolus blakei* grows in red sandy clay, loam associated with creeks.	Highly Unlikely – this species occurs in Central Australia
Stackhousia sp. Red-blotched corolla (A. Markey 911)		Priority 3		*Stackhousia* sp. Red-blotched corolla is recorded from light brown yellow silty-gravel, with surface granite and lateritic gravel and cobbels, on a very steep slope (Western Australian Herbarium, 1996)	Highly Unlikely – not suitable habitat
Stylidium aceratum		Priority 3		*Stylidium aceratum* occurs in sandy soils in swamp heathland.	Highly Unlikely – not suitable habitat
Stylidium periscelianthum	Pantaloon Triggerplant	Priority 3		The Pantaloon Triggerplant occurs in loamy clay, moist soils pockets on wet flats, low granitic hills.	Highly Unlikely – not suitable habitat
Tetratheca pilifera		Priority 3		*Tetratheca pilifera* occurs in gravelly soils.	Highly Unlikely – not gravel habitat

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
Thysanotus anceps		Priority 3		*Thysanotus anceps* grows on white or grey sand, lateritic gravel, laterite.	Highly Unlikely – not lateritic habitat
Tricostularia drummondii	Drummond's Tricostularia	Priority 3		Drummond's Tricostularia occurs in grey sand in Banksia Woodlands.	Possible
Verticordia serrata var. *linearis*		Priority 3		*Verticordia serrata* var. *linearis* grows in white sand, gravel in open woodland.	Highly Unlikely – not gravel habitat
Acacia oncinophylla subsp. *patulifolia*		Priority 4		*Acacia oncinophylla* subsp. *patulifolia* occurs on granitic soils, occasionally on laterite.	Highly Unlikely – not suitable habitat
Aponogeton hexatepalus	Stalked Water Ribbons	Priority 4		Stalked Water Ribbons grow in freshwater: ponds, rivers, claypans	Highly Unlikely – not suitable habitat
Boronia tenuis	Blue Boronia	Priority 4		Blue Boronia prefers laterite, stony soils, granite.	Highly Unlikely – not suitable habitat
Calothamnus accedens		Priority 4		*Calothamnus accedens* occurs in sandy soils over laterite on road verges.	Highly Unlikely – not lateritic habitat
Calothamnus brevifolius		Priority 4		*Calothamnus brevifolius* occurs in white/grey or yellow sand.	Highly Unlikely – outside of species range
Darwinia pimelioides		Priority 4		*Darwinia pimelioides* prefers loam, sandy loam on granite outcrops.	Highly Unlikely – not suitable habitat
Drosera occidentalis	Western Sundew	Priority 4		The Western Sundew occurs in sandy and clayey soils in swamps and wet depressions.	Highly Unlikely – not suitable habitat
Gastrolobium stipulare		Priority 4		*Gastrolobium stipulare* grows in yellow-grey sand, gravelly clay loam, laterite on slopes, ridges.	Highly Unlikely – not suitable habitat
Grevillea pimeleoides		Priority 4		*Grevillea pimeleoides* grows in gravelly soils over granite on rocky hillsides.	Highly Unlikely – not suitable habitat
Hibbertia montana		Priority 4		*Hibbertia montana* occurs in loam over granite, lateritic soils, gravel on granite rocks, lateritic ridges and boulders, hills.	Highly Unlikely – not suitable habitat

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
Hydrocotyle lemnoides	Aquatic Pennywort	Priority 4		Aquatic Pennywort occurs in swamps	Highly Unlikely – not suitable habitat
Jacksonia sericea	Waldjumi	Priority 4		Waldjumi grows in calcareous and sandy soils.	Possible
Lasiopetalum bracteatum	Helena Velvet Bush	Priority 4		Helena Velvet Bush occurs in sandy clay, clay, lateritic gravel along drainage lines, creeks, gullies, granite outcrops.	Highly Unlikely – not suitable habitat
Lechenaultia longiloba	Scarlet Leschenaultia	Priority 4		Scarlet Leschenaultia grows in sand with lateritic gravel on undulating plains.	Highly Unlikely – not suitable habitat
Microtis quadrata	South Coast Mignonette Orchid	Priority 4		South Coast Mignonette Orchid occurs on clay based coastal flats (Brown *et al*., 2013).	Unlikely – not typical habitat
Ornduffia submersa		Priority 4		*Ornduffia submersa* grows in freshwater 0.05-0.6 m deep in pools, lakes, swamps, winter-wet depressions, claypans.	Highly Unlikely – not suitable habitat
Persoonia sulcata		Priority 4		*Persoonia sulcata* occurs in lateritic or granitic soils.	Highly Unlikely – not suitable habitat
Pimelea rara		Priority 4		*Pimelea rara* occurs in lateritic soils.	Highly Unlikely – not lateritic habitat
Schoenus griffinianus		Priority 4		*Schoenus griffinianus* grows in white sand in low heath (Wilson, 1997).	Highly Unlikely – not suitable habitat
Schoenus natans	Floating Bog-rush	Priority 4		Floating Bog-rush is an aquatic species that occurs in winter-wet depressions.	Highly Unlikely – not suitable habitat
Senecio leucoglossus		Priority 4		*Senecio leucoglossus* prefers gravelly lateritic or granitic soils with granite outcrops on slopes.	Highly Unlikely – not suitable habitat
Stylidium longitubum	Jumping Jacks	Priority 4		Jumping Jacks prefer sandy clay, clay in seasonal wetlands.	Highly Unlikely – not suitable habitat
Stylidium scabridum	Moth Triggerplant	Priority 4		Moth Triggerplant occurs in sand in open woodland or heath.	Highly Unlikely – not known on the Swan Coastal Plain

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
Stylidium striatum	Fan-leaved Triggerplant	Priority 4		The Fan-leaved Triggerplant grows in brown clay loam over laterite on hillslopes in Jarrah/Marri forest, Wandoo woodland.	Highly Unlikely – not lateritic habitat
Thysanotus glaucus		Priority 4		*Thysanotus glaucus* occurs in white, grey or yellow sand, sandy gravel.	Unlikely – not typical habitat
Trithuria australis		Priority 4		*Trithuria australis* occurs in granite, clay in shallow pools, seasonal swamps.	Highly Unlikely – not suitable habitat
Verticordia lindleyi subsp. *lindleyi*		Priority 4		*Verticordia lindleyi* subsp. *lindleyi* prefers sand, sandy clay in winter-wet depressions.	Highly Unlikely – not suitable habitat

* sourced from Florabase as well as the DBCA database searches unless otherwise denoted

3.2.2 TEC/PEC Database Searches

A search of DBCA's Threatened (TEC) and Priority Ecological Communities (PEC) database was conducted within a radius of 10 km around the site (06-0919EC) (Appendix 5). Two Priority Ecological Communities were identified that are a federally listed TEC. The communities identified in the database searches are outlined in Table 3.

Table 3: TEC and PECs Identified in Database Searches

Number	Description	Conservation Status in Western Australia	Status under the EPBC Act
SCP3a	*Corymbia calophylla - Kingia australis* woodlands on heavy soils, Swan Coastal Plain (floristic community type 3a as originally described in Gibson et al. (1994))	Critically Endangered	Endangered
SCP3a	*Corymbia calophylla - Kingia australis* woodlands on heavy soils, Swan Coastal Plain (floristic community type 3a as originally described in Gibson et al. (1994))	Critically Endangered	Endangered
SCP20c	Shrublands and woodlands of the eastern side of the Swan Coastal Plain (floristic community type 20c as originally described in in Gibson et al. (1994))	Critically Endangered	Endangered as part of the Banksia WL SCP
SCP02	Southern wet shrublands, Swan Coastal Plain (floristic community type 2 as originally described in Gibson et al. (1994))	Endangered	
SCP20a	*Banksia attenuata* woodlands over species rich dense shrublands (floristic community type 20a as originally described in Gibson et al. (1994))	Endangered	Endangered
SCP20b	*Banksia attenuata* and/or *Eucalyptus marginata* woodlands of the eastern side of the Swan Coastal Plain (floristic community type 20b as originally described in Gibson et al. (1994))	Endangered	Endangered as part of the Banksia WL SCP
SCP08	Herb rich shrublands in clay pans (floristic community type 8 as originally described in Gibson et al. (1994))	Vulnerable	Critically Endangered
SCP21c	Low lying *Banksia attenuata* woodlands or shrublands	Priority 3	Endangered as part of the Banksia WL SCP
Coastal Saltmarsh	Subtropical and Temperate Coastal Saltmarsh	Priority 3	Vulnerable
Banksia WL SCP	Banksia Woodlands of the Swan Coastal Plain ecological community	Priority 3	Endangered
Central Granite Shrublands (Com 5, Markey)	Central Northern Darling Scarp Granite Shrubland Community	Priority 4	

3.3 Flora

A total of 89 plant species were recorded during the flora survey (Appendix 6). This total consisted of 44 native species and 45 (50.6%) introduced species. The number and percentage of introduced species is very high and is a reflection of the overall Degraded condition of the vegetation.

The plant Families with the highest representation of species were the Myrtaceae (Myrtle family – 16 species 13 native and 3 introduced), Poaceae (Grass family – 8 species all introduced), Fabaceae (Wattle and Pea family – 7 species, 4 native and 3 introduced), Iridaceae (Iris family – 7 species 1 native and 6 introduced) and Asteraceae (Daisy family – 6 species, all introduced).

No Threatened or Priority species were recorded on the site.

There were three Declared Pests on the site being:

- Arum Lily (*Zantedeschia aethiopica*);
- Cotton Bush (*Gomphocarpus fruticosus*); and
- One-Leafed Cape Tulip (*Moraea flaccida*).

Species richness in the 8 quadrats ranged from 7-18 (average 11.5) with 2-13 weed species (average 8.25) (Appendix 7). The average proportion of weed species in the quadrats was 70%.

The exotic tree species planted on Lot 5 included Lemon-scented Gum (*Corymbia citriodora*), River Red Gum (*Eucalyptus camaldulensis*), Spotted Gum (*Corymbia maculata*) and River She-oak (*Casuarina cunninghamiana*).

3.4 Vegetation

3.4.1 Vegetation Complexes

Vegetation complexes are a very broad mapping unit based on landform and soils type. The vegetation complex mapped on the site is the Forrestfield Complex (Heddle *et al.*, 1980). The Forrestfield Complex ranges from open forest of *Corymbia calophylla* (Marri) – *Eucalyptus wandoo* (Wandoo) – *Eucalyptus marginata* (Jarrah) to open forest of *Eucalyptus marginata* (Jarrah) – *Corymbia calophylla* (Marri) – *Allocasuarina fraseria*na (Sheoak) – *Banksia* species. Fringing woodland of *Eucalyptus rudis* (Flooded Gum) in the gullies that dissect this landform (Heddle *et al.,* 1980).

3.4.2 Vegetation Types

Vegetation types are a finer level of vegetation description and mapping used for small scale sites, such as the survey area. Vegetation types are described based on the structure of the vegetation (eg. woodland, heath) and the dominant species in each structure.

Seven vegetation types were described and mapped on the site (Figure 3). The vegetation types are described in Table 4. In addition, individual native trees of Marri and *Eucalyptus todtiana* and stands of exotic species were mapped.

Quadrat Data are in Appendix 7.

Table 4: Vegetation Types on the Site

Vegetation Type		Description	Photograph
Xp	*Xanthorrhoea preissii* Open Low Heath	This vegetation type occurred at the western end of the old Helena Valley Road reserve. The *Xanthorrhoea preissii* shrubs were 1-1.5m high. Eleven of the other 12 species recorded in the quadrat were weed species with the most common being *Lolium rigidum, Hypochaeris glabra* and *Ehrharta calycina.* The soils are black sand, moist. Quadrat HV1 is representative of this vegetation type.	
BmLl	*Banksia menziesii/ *Leptospermum laevigatum* Low Open Woodland	Occurs within the old Helena Valley Road reserve and is all in Degraded condition. *Banksia menziesii* trees are up to 4m high and relatively dense at 40%. *Allocasuarina fraseriana* is occasionally present also to 4m. Victorian Teatree (*Leptospermum laevigatum*) is common. Most of the understorey species are weeds with Annual and Perennial Veldtgrass (*Ehrharta longiflora, E. calcyina*) the most common. The soils are dark grey sand. Quadrat HV2 is representative of this vegetation type.	

Vegetation Type		Description	Photograph
Ll	**Leptospermum laevigatum* Tall Open Scrub	Most of the vegetation in the old Helena Valley Road reserve consists of the introduced Victorian Teatree (*Leptospermum laevigatum*) which occurs up to 5m high and quite dense at 50-70%. The understorey is sparse and predominantly weed species, with *Fumaria capreolata* very common. The soils are black sand. Quadrat HV3 is representative of this vegetation type.	
ErMr	*Eucalyptus rudis* Woodland over *Melaleuca rhaphiophylla* Low Open Woodland	Two areas containing this vegetation type occur on the southern banks of Kadina Brook. *Eucalyptus rudis* (Flooded Gum) is up to 28m high and moderately dense (25-40%). *Melaleuca rhaphiophylla* trees are 4-6m high and sparse. The understorey of one stand is almost completely Kikuyu Grass () with no native species. The other stand, picture right, has some native shrubs (*Taxandria linearifolia, Astartea affinis*) and sedges (*Lepidosperma tetraquetrum*) and ground covers (*Centella asiatica*). The soils are black, loamy sand, moist. Quadrats HV4 and 5 are representative of this vegetation type.	

Vegetation Type		Description	Photograph
Er	*Eucalyptus rudis* Woodland over weeds	Most of the flat floodplain through which the Kadina Brook watercourse runs contains Flooded Gums 25-28m high. Paperbarks are almost completely absent as are smaller native shrubs, sedges and herbs. Annual Veldtgrass (*Ehrharta longiflora*) dominates the understorey. A few native *Melaleuca teretifolia* shrubs occurred in the understorey which was predominantly weeds, including Annual Veldtgrass. The soils are dark brownish-black loamy sand and were waterlogged and partially inundated in September 2022. Quadrat HV8 is representative of this vegetation type.	
Mr	*Melaleuca rhaphiophylla* Low Open Forest over weeds	One stand of *Melaleuca rhaphiophylla* Low Open Forest occurred on the southern boundary of the Kadina Brook floodplain. No Flooded Gums occurred in this area. The *M. rhaphiophylla* trees were up to 8m high and quite dense The soils are dark brownish-black sand, partially inundated in September 2022. Quadrat HV6 is representative of this vegetation type.	

Vegetation Type	Description	Photograph
Ew *Eucalyptus wandoo* Woodland over weeds	One small stand of Wandoo (*Eucalyptus wandoo*) occurred on a slight rise within the Kadina Brook floodplain. The Wandoo trees are mature and appear to be natural rather than planted. The understorey is all weeds with Annual Veldtgrass the most common species. The soils are dark brownish-black sandy loam, not waterlogged Quadrat HV7 is representative of this vegetation type.	

3.4.3 Vegetation Condition

The condition of the vegetation was assessed according to the system devised by Keighery and described in Bush Forever (Government of Western Australia, 2000) (Table 5).

Table 5: Vegetation Condition Rating Scale.

Condition	Description
Pristine	Pristine or nearly so, no obvious signs of disturbance.
Excellent	Vegetation structure intact, disturbance affecting individual species and weeds are non-aggressive species.
Very Good	Vegetation structure altered, obvious signs of disturbance. For example, disturbance to vegetation structure caused by repeated fires, the presence of some more aggressive weeds, dieback, logging and grazing.
Good	Vegetation structure significantly altered by very obvious signs of multiple disturbance. Retains basic vegetation structure or ability to regenerate it. For example, disturbance to vegetation structure caused by very frequent fires, the presence of some very aggressive weeds at high density, partial clearing, dieback and grazing.
Degraded	Basic vegetation structure severely impacted by disturbance. Scope for regeneration but not to a state approaching good condition without intensive management. For example, disturbance to vegetation structure caused by very frequent fires, the presence of very aggressive weeds, partial clearing, dieback and grazing.
Completely Degraded	The structure of the vegetation is no longer intact and the area is completely or almost completely without native species. These are often described as 'parkland cleared' with the flora comprising weed or crop species with isolated native trees or shrubs.

Source: Government of Western Australia, 2000.

Most of the areas of native vegetation on the site were rated as Degraded to Completely Degraded (Figure 4). Only one area close to Kadina Brook was rated as Very Good with some native understorey. The overall low quality is due to the vegetation in the old Helena Valley Road reserve being regrowth among dense Victorian Teatree and other weeds, and the vegetation associated with Kadina Brook being heavily grazed by horses.

3.5 Conservation Significance of Flora and Vegetation

3.5.1 Flora

No Threatened or Priority species were recorded on the site.

3.5.2 Vegetation

Vegetation Complexes

The vegetation on the site is part of the Forrestfield complex. Approximately 2,803ha of the original 22,813ha extent of the Forrestfield Complex remains on the Swan Coastal Plain, representing 12.29% (WALGA, 2018). The EPA considers that vegetation complexes with less than 10% remaining in constrained areas such as the Perth Metropolitan Region are regionally significant and that for these complexes there is a presumption that all areas of remnant native vegetation where less than 10%

remains will be retained and conserved. The 11.9% retention amount for the Forrestfield Complex is above the 10% target.

The survey area contains very little intact native vegetation. The predominant Degraded and Completely Degraded areas containing native trees and very little to no native understorey have no conservation significance in terms of protecting good quality vegetation within the vegetation complex.

Threatened and Priority Ecological Communities

The site is too degraded to be representative of any State Listed TEC.

There are areas on the site that contain Banksia tree species that may be part of the Banksia Woodlands of the Swan Coastal Plain Threatened Ecological Community (Banksia Woodland TEC) (Figure 3). The community is listed as Endangered under the EPBC Act but is listed as a Priority Ecological Community at State level.

For an area containing Banksia trees to be defined as the Banksia Woodland TEC it needs to meet several criteria. An assessment of the BmLl vegetation is made against these criteria in Table 6.

One of the criteria is for the vegetation to be in at least Good condition. The areas of *Banksia menziesii* woodland in the old Helena Valley Road reserve are in Degraded condition. Therefore, these areas do not meet the minimum criteria for inclusion in the Banksia Woodland TEC.

Ecological Linkages

The regrowth vegetation in the old Helena Valley Road reserve is adjacent to native vegetation in a parallel unmade road reserve that is 25m wide. The unmade road reserve is adjacent to the Bushmead Bushland Bush Forever site (Site 213). The vegetation in the part of the Bush Forever site closest to the old Helena Valley Road reserve is mapped as a Threatened Ecological Community (SCP 20a). The vegetation in the old road reserve is considered to be too degraded to form any significant ecological linkage value to the Bush Forever Site. In fact, the dominance of the very invasive Victorian Teatree suggests that the current vegetation in the old road reserve is a serious threat to the vegetation in the Bush Forever site.

The vegetation on the site associated with Kadina Brook is predominantly trees with almost no native understorey. The trees are part of an ecological corridor that continues along Kadina Brook to the north-west and south-east. The ecological corridor would be primarily for bird species in the tree canopy but could also be for some ground-dwelling animals such as Quenda.

Table 6: Assessment of the Banksia Woodland of the Swan Coastal Plain TEC.

Feature	Characteristic	EmLl Vegetation Type
Banksia Species	The patch must include at least one of the following diagnostic species: • *Banksia attenuata* (Candlestick Banksia) • *Banksia menziesii* (Firewood Banksia) • *Banksia prionotes* (Acorn Banksia) • *Banksia ilicifolia* (Holly-Leaved Banksia).	Contains *Banksia menziesii*
Vegetation Structure	• A distinctive upper sclerophyllous layer of low trees (occasionally large shrubs more than 2 m tall) typically dominated or codominated[3] by one or more of the *Banksia* species (*B. attenuata, B. menziesii, B. ilicifolia, B. prionotes*). • An emergent tree layer of medium or tall (>10 m) height *Eucalyptus* or *Allocasuarina* (Sheoak) species may sometimes be present above the *Banksia* canopy. • An understorey that is often highly species-rich consists of: – A layer of sclerophyllous shrubs of various heights; and, – A herbaceous ground layer of cord rushes, sedges and perennial and ephemeral forbs, that sometimes includes grasses. The development of a ground layer may vary depending on the density of the shrub layer and disturbance history.	*Banksia menziesii* the main tree species present. Several *Allocasuarina fraseriana, Eucalyptus todtiana* present. Understorey contains very few native species and is not highly species-rich.
Vegetation Condition	An area of Banksia woodland needs to be at least in Good condition to be considered the TEC.	Condition rating is Degraded
Patch Size	The Banksia woodland TEC needs to meet a minimum 'patch' size depending on its condition to qualify as the TEC, as follows: • 'Pristine' – no minimum patch size • 'Excellent' – 0.5ha • 'Very Good' – 1ha • 'Good' – 2ha	The condition rating is below the minimum requirement for the TEC
Conclusion		**The vegetation does not meet the criteria of Banksia Woodlands of the Swan Coastal Plain TEC.**

4 FAUNA

4.1 Methodology

A Basic Fauna Survey was undertaken in accordance with EPA Technical Guidance *Fauna Surveys for Environmental Impact Assessment* (EPA, 2020). Desktop studies were undertaken to identify habitats and potential threatened species that may occur on the site. A site reconnaissance was conducted by PGV Environmental on 9 September 2022. The inspection included traversing the site on foot.

4.2 Desktop Studies

Desktop studies were undertaken to identify conservation significant species potentially present on the site. A search of the DBCA Database in a 10 km radius from the site (Appendix 8), Atlas of Living Australia database in a radius 10km from the site (Appendix 2) and the EPBC Act Protected Matters Search Tool (Appendix 3) in a 5km radius from the site identified threatened species of fauna previously recorded in the search area or potentially having habitat in the search area (Table 7).

Table 7: List of Fauna Species Identified from Fauna Database Searches

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act
Bettongia penicillata ogilbyi (Listed as *Bettongia penicillata* under the EPBC Act)	Woylie, Brush-tailed Bettong	Schedule 1 - CR	Endangered
Calidris ferruginea	Curlew Sandpiper	Schedule 1 - CR	Critically Endangered
Calidris tenuirostris	Great Knot	Schedule 1 - CR	Marine/ Migratory
Cherax tenuimanus	Margaret River Hairy Marron	Schedule 1 - CR	Critically Endangered
Dasyornis longirostris	Western Bristlebird	Schedule 1 - CR	Endangered
Numenius madagascariensis	Eastern Curlew	Schedule 1 - CR	Critically Endangered
Pseudemydura umbrina	Western Swamp Tortoise	Schedule 1 - CR	Critically Endangered
Pseudocheirus occidentalis	Western Ringtail Possum, Ngwayir	Schedule 1 - CR	Critically Endangered
Botaurus poiciloptilus	Australasian bittern	Schedule 2 - EN	Endangered
Calidris canutus	Red Knot	Schedule 2 - EN	Marine/ Migratory
Calyptorhynchus (Zanda) baudinii	Baudin's Black Cockatoo	Schedule 2 - EN	Endangered
Calyptorhynchus (Zanda) latirostris	Carnaby's Black Cockatoo	Schedule 2 - EN	Endangered
Galaxiella nigrostriata	Black-stripe Minnow	Schedule 2 - EN	Endangered
Leioproctus douglasiellus	A Short-tongued Bee	Schedule 2 - EN	Critically Endangered
Myrmecobius fasciatus	Numbat, Walpurti	Schedule 2 - EN	Endangered
Neopasiphae simplicior	A Short-tongued Bee	Schedule 2 - EN	Critically Endangered

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act
Rostratula australis (Rostratula benghalensis australis)	Australian Painted Snipe	Schedule 2 - EN	Endangered Marine/ Migratory
Calyptorhynchus banksii naso	Forest Red-tailed Black-Cockatoo	Schedule 3 - VU	Vulnerable
Dasyurus geoffroii	Chuditch, Western Quoll	Schedule 3 - VU	Vulnerable
Falco hypoleucos	Grey Falcon	Schedule 3 - VU	Vulnerable
Leipoa ocellata	Mallee Fowl	Schedule 3 - VU	Vulnerable
Macrotis lagotis	Bilby, Dalgyte, Ninu	Schedule 3 - VU	Vulnerable
Setonix brachyurus	Quokka	Schedule 3 - VU	Vulnerable
Sternula nereis nereis (Sterna nereis nereis)	Australian Fairy Tern	Schedule 3 - VU	Vulnerable
Westralunio carteri	Carter's Freshwater Mussel	Schedule 3 - VU	Vulnerable
Charadrius leschenaultii	Greater Sand Plover	Schedule 3 - VU Schedule 5 - IA	Marine/ Migratory
Actitis hypoleucos	Common Sandpiper	Schedule 5 - IA	Marine/ Migratory
Apus pacificus	Fork-tailed Swift	Schedule 5 - IA	Marine/Migratory
Arenaria interpres	Ruddy Turnstone	Schedule 5 - IA	Marine/ Migratory
Calidris acuminata	Sharp-tailed Sandpiper	Schedule 5 - IA	Marine/ Migratory
Calidris alba	Sanderling	Schedule 5 - IA	Marine/ Migratory
Calidris melanotos	Pectoral Sandpiper	Schedule 5 - IA	Marine/ Migratory
Calidris ruficollis	Red-necked Stint	Schedule 5 - IA	Marine/ Migratory
Calidris subminuta	Long-toed Stint	Schedule 5 - IA	Marine/ Migratory
Hirundapus caudacutus	White-throated Needletail	Schedule 5 - IA	Marine/ Migratory
Hydroprogne caspia (Sterna caspia)	Caspian Tern	Schedule 5 - IA	Marine/ Migratory
Limosa lapponica	Bar-tailed Godwit	Schedule 5 - IA	Marine/ Migratory
Limosa limosa	Black-tailed Godwit	Schedule 5 - IA	Migratory/ Marine
Macronectes giganteus	Southern Giant Petrel	Schedule 5 - IA	Endangered/ Migratory/ Marine
Macronectes halli	Northern Giant-Petrel	Schedule 5 - IA	Vulnerable/ Migratory/Marine
Motacilla cinerea	Grey Wagtail	Schedule 5 - IA	Migratory/ Marine
Pandion cristatus (Pandion haliaetus)	Osprey	Schedule 5 - IA	Marine/ Migratory
Plegadis falcinellus	Glossy Ibis	Schedule 5 - IA	Marine/Migratory
Pluvialis squatarola	Grey Plover	Schedule 5 - IA	Marine/ Migratory
Thalasseus bergii (Sterna bergii)	Crested Tern	Schedule 5 - IA	Marine/ Migratory
Tringa glareola	Wood Sandpiper	Schedule 5 - IA	Marine/ Migratory
Tringa nebularia	Common Greenshank	Schedule 5 - IA	Marine/ Migratory

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act
Tringa stagnatilis	Marsh Sandpiper, Little Greenshank	Schedule 5 - IA	Marine/ Migratory
Cacatua pastinator pastinator	Muir's Corella	Schedule 6 - CD	Vulnerable
Phascogale tapoatafa wambenger	South-western Brush-tailed Phascogale, Wambenger	Schedule 6 - CD	
Falco peregrinus	Peregrine Falcon	Schedule 7 - OS	Marine/ Migratory
Ardea alba	Great Egret, White Egret		Marine
Egretta sacra	Eastern Reef Egret, Eastern Reef Heron		Marine
Halobaena caerulea	Blue Petrel		Vulnerable/ Marine
Himantopus himantopus	Black-winged Stilt		Marine
Merops ornatus	Rainbow Bee-eater		Marine
Pachyptila turtur subsp. subantarctica	Fairy Prion (southern)		Vulnerable
Recurvirostra novaehollandiae	Red-necked Avocet		Marine/ Migratory
Ixobrychus flavicollis australis (southwest subpop.)	Australian Black Bittern (southwest pop)	Priority 1	
Kawaniphila pachomai	Grey Vernal Katydid (southwest)	Priority 1	
Austrosaga spinifer	Spiny Katydid (Swan Coastal Plain)	Priority 2	
Glossurocolletes bilobatus (Previously Leioproctus bilobatus)	A Short-tongued Bee (southwest)	Priority 2	
Acanthophis antarcticus	Southern Death Adder	Priority 3	
Australotomurus morbidus	Cemetery Springtail, Guildford Springtail	Priority 3	
Ctenotus gemmula (Swan Coastal Plain pop)	Jewelled South-west Ctenotus	Priority 3	
Geotria australis	Pouched Lamprey	Priority 3	
Hylaeus globuliferus	Woolybush Bee	Priority 3	
Idiosoma sigillatum	Swan Coastal Plain shield-backed trapdoor spider	Priority 3	
Lerista lineata	Perth Slider, Lined Skink	Priority 3	
Neelaps calonotos	Black-striped Snake	Priority 3	
Ctenotus delli	Dell's Ctenotus, Darling Range Heath Ctenotus	Priority 4	
Falsistrellus mackenziei	Western False Pipistrelle	Priority 4	
Hydromys chrysogaster	Water-rat, Rakali	Priority 4	

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act
Isoodon fusciventer	Southern Brown Bandicoot, Quenda	Priority 4	
Ixobrychus dubius	Australian Little Bittern	Priority 4	
Notamacropus eugenii derbianus	Tammar Wallaby	Priority 4	
Notamacropus irma	Western Brush Wallaby	Priority 4	
Oxyura australis	Blue-billed Duck	Priority 4	
Platycercus icterotis xanthogenys	Western Rosella (inland ssp)	Priority 4	
Synemon gratiosa	Graceful Sun-moth	Priority 4	

Fauna are classified under five different Priority codes and rare and endangered fauna are classified under the *Wildlife Conservation (Specially Protected Fauna) Notice 2014* into five schedules of taxa. These are outlined in Appendix 4.

4.3 Fauna Habitat

Four fauna habitats occur on the site. The vegetation dominated by *Banksia* is described as Woodland habitat (Plate 6). The parkland cleared areas associated with the Kadina Brook floodplain are Open Woodland habitat (Plate 7). Kadina Brook provides creekline habitat (Plate 8) and the paddock areas are Cleared habitat (Plate 9).

Plate 6: Woodland Fauna Habitat

Plate 7: Open Woodland Fauna Habitat

Plate 8: Cleared Fauna Habitat

Plate 9: Creek Fauna Habitat

Fauna habitat can be assessed using a number of factors including, the size of the habitat, the level of habitat connectivity, availability of specific resources (e.g. tree hollows) and overall vegetation quality. The habitat was assessed according to the following categories:

High Quality Fauna Habitat – These areas closely approximate the vegetation mix and quality that would have been in the area prior to any disturbance. The habitat has connectivity with other habitats and is likely to contain the most natural vertebrate fauna assemblage.

Very Good Fauna Habitat - These areas show minimal signs of disturbance (e.g. grazing, clearing, fragmentation, weeds) and generally retain many of the characteristics of the habitat if it had not been disturbed. The habitat has connectivity with other habitats and fauna assemblages in these areas are likely to be minimally affected by disturbance.

Good Fauna Habitat – These areas showed signs of disturbance (e.g. grazing, clearing, fragmentation, weeds) but generally retain many of the characteristics of the habitat if it had not been disturbed. The habitat has connectivity with other habitats and fauna assemblages in these areas are likely to be affected by disturbance.

Disturbed Fauna Habitat – These areas showed signs of significant disturbance. Many of the trees, shrubs and undergrowth are cleared. These areas may be in the early succession and regeneration stages. Areas may show signs of significant grazing, contain weeds or have been damaged by vehicle or machinery. Habitats are fragmented or have limited connectivity with other fauna habitats. Fauna assemblages in these areas are likely to differ significantly from what might be expected in the area had the disturbance not occurred.

Highly Degraded Fauna Habitat – These areas often have a significant loss of vegetation, an abundance of weeds, and a large number of vehicle tracks or are completely cleared. Limited or

no fauna habitat connectivity. Faunal assemblages in these areas are likely to be significantly different to what might have been in the area pre-disturbance. (Coffey Environments, 2009).

The vegetation in all habitats is highly degraded with almost no native understorey. The Woodland habitat has connectivity with other parts of the Kadina Brook environment to the south-east and north-west and is therefore rated as Good Fauna Habitat. The remainder of the habitats on the site are considered to be Highly Degraded Fauna Habitat.

4.4 Conservation Significant Species

Outlined below in Table 7 is a short description of the preferred habitat for each of the species that were identified in the DBCA Database Search (Appendix 8), Atlas of Living Australia Species Report (Appendix 2) and the EPBC Protected Matters Search Tool (Appendix 3) in Table 6. The preferred habitat has been compared to the habitats on the site described above and the likelihood of each species to be present was determined. Marine and pelagic species have not been included.

Table 9: Preferred Habitat of Conservation Significant Fauna Species

Scientific Name	Common Name	Habitat*	Likelihood to Occur on the Site
Schedule 1 – Critically Endangered			
Bettongia penicillata ogilbyi (Bettongia penicillata)	Woylie, Brush-tailed Bettong	The Woylie habitat types ranged from forest to grassland, coastal and inland. During the day the Woylie shelters under patches of dense undergrowth, logs and rock-cavities and occasionally in burrows.	Highly Unlikely – the site is too disturbed
Calidris ferruginea	Curlew Sandpiper	Curlew Sandpipers mainly occur on intertidal mudflats in sheltered coastal areas, such as estuaries, bays, inlets and lagoons, and also around non-tidal swamps, lakes and lagoons near the coast, and ponds in saltworks and sewage farms.	Highly Unlikely – not typical habitat and site is too open
Calidris tenuirostris	Great Knot	The Great Knot winters in Australia, occurring in sheltered coastal habitats such as inlets, bays, harbours, estuaries and lagoons with large intertidal mud and sandflats, oceanic sandy beaches with nearby mudflats, sandy spits and islets, muddy shorelines with mangroves and occasionally exposed reefs or rock platforms. It roosts in refuges such as shallow water in sheltered sites, on coastal dunes or on saltflats amongst mangroves during high tides (BirdLife International, 2015a).	Highly Unlikely – not suitable habitat
Cherax tenuimanus	Margaret River Hairy Marron	The Margaret River Hairy Marron occurs in fresh water in the Margaret River Area.	Highly Unlikely – outside of species range
Dasyornis longirostris	Western Bristlebird	The Western Bristlebird is restricted to floristically diverse low dense coastal heathland.	Highly Unlikely – not suitable habitat

Scientific Name	Common Name	Habitat*	Likelihood to Occur on the Site
Numenius madagascariensis	Eastern Curlew	The Eastern Curlew is most commonly associated with sheltered coasts, especially estuaries, bays, harbours, inlets and coastal lagoons, with large intertidal mudflats or sandflats, often with beds of seagrass. Occasionally, the species occurs on ocean beaches (often near estuaries), and coral reefs, rock platforms, or rocky islets.	Highly Unlikely – not suitable habitat
Pseudemydura umbrina	Western Swamp Tortoise	The Western Swamp Tortoise is restricted to very few wild populations. During winter and spring, the tortoises live in the water. This species is carnivorous feeding on insects, larvae and tadpoles (Burbidge and Kuchling, 1994). In the drier, hotter months they shelter under leaf litter and in holes and aestivate (sleep).	Highly Unlikely – not suitable habitat
Pseudocheirus occidentalis	Western Ringtail Possum, Ngwayir	The Western Ringtail Possum is a medium sized nocturnal marsupial. This species occurs in and near coastal Peppermint Tree (*Agonis flexuosa*) forest and Tuart (*Eucalyptus gomphocephala*) dominated forest with a Peppermint Tree understorey.	Highly Unlikely – not suitable habitat
Schedule 2 – Endangered			
Botaurus poiciloptilus	Australasian bittern	The Australasian Bittern occurs mainly in densely vegetated freshwater wetlands and, rarely, in estuaries or tidal wetlands.	Highly Unlikely – the site is too open
Calidris canutus	Red Knot	In Australasia the Red Knot mainly inhabit intertidal mudflats, sandflats and sandy beaches of sheltered coasts, in estuaries, bays, inlets, lagoons and harbours; sometimes on sandy ocean beaches or shallow pools on exposed wave-cut rock platforms or coral reefs.	Highly Unlikely – not suitable habitat
Calyptorhynchus baudinii	Baudin's Black Cockatoo	Baudin's Black-Cockatoo mainly occurs in eucalypt forests, especially Jarrah (*Eucalyptus marginata*), Marri (*Corymbia calophylla*), also Karri (*Eucalyptus diversicolor*) forest, often feeding in the understorey on proteaceous trees and shrubs, especially banksias (SEWPaC, 2012).	Possible vagrant visitor to the site
Calyptorhynchus latirostris	Carnaby's Black Cockatoo	Carnaby's Cockatoo is found in the south-west of Australia from Kalbarri through to Ravensthorpe. It has a preference for feeding on the seeds of Banksia, Hakea, Eucalyptus, Grevillea, Pinus and Allocasuarina spp. It is nomadic often moving toward the coast after breeding. Nesting mostly occurs in smooth-barked trees (e.g. Salmon Gum, Wandoo, Red Morrell) (SEWPaC, 2012).	Likely to occur intermittently on the site

Scientific Name	Common Name	Habitat*	Likelihood to Occur on the Site
Galaxiella nigrostriata	Black-stripe Minnow	The Blackstriped Dwarf Galaxias is found only in coastal wetlands of south-west Western Australia. During summer when ephemeral pools dry out, Blackstriped Dwarf Galaxias burrow into the moist soil below and aestivate until the rains return in autumn (Fishes of Australia, 2015).	Highly Unlikely – not coastal wetland habitat
Leioproctus douglasiellus	A Short-tongued Bee	The short-tongued bee species is only known from three locations within the Perth metropolitan area ranging from Cannington to Forrestdale. Specimens have been collected on two plant species, *Goodenia filiformis* and *Anthotium junciforme* (TSSC, 2013) and with pollen from *Philotheca spicata*, *Patersonia occidentalis*, two species of *Stylidium*, a species of *Scaevola* and species from Fabaceae and Myrtaceae (DBCA, 2018).	Highly Unlikely – not suitable habitat
Myrmecobius fasciatus	Numbat, Walpurti	Numbats occur in eucalypt forests and woodlands dominated by *Eucalyptus marginata, Corymbia calophylla and Eucalyptus wandoo*.	Highly Unlikely – the site is too disturbed
Neopasiphae simplicior	A Short-tongued Bee	The Short-tongued Bee species is restricted in range, thought to only occur in a single location within the bushland of the Forrestdale Lake Nature Reserve adjacent to Forrestdale Lake and the Armadale Golf Course, with a previous population known from Cannington. It has been collected at flowers of *Goodenia filiformis, Lobelia tenuior, Angianthus preissianus* and *Velleia* sp. It occurs in two TECs, Type 8 and Type 10a. Males roost overnight in flowers of Asteraceae (Houston, 2000).	Highly Unlikely – not suitable habitat
Rostratula australis (Rostratula benghalensis australis)	Australian Painted Snipe	The Australian Painted Snipe has been recorded at wetlands in all states of Australia but is most common in eastern Australia. It generally inhabits shallow terrestrial freshwater (occasionally brackish) wetlands, including temporary and permanent lakes, swamps and claypans. It also uses inundated or waterlogged grassland or saltmarsh, dams, rice crops, sewage farms and bore drains. Typical sites include a cover of vegetation, including grasses.	Highly Unlikely – the site is too disturbed

Scientific Name	Common Name	Habitat*	Likelihood to Occur on the Site
Schedule 3 – Vulnerable			
Calyptorhynchus banksii naso	Forest Red-tailed Black-Cockatoo	Forest Red-tailed Black Cockatoos frequent the humid to sub-humid south-west of Western Australia from Gingin in the north, to Albany in the south and west to Cape Leeuwin and Bunbury (SEWPaC, 2012). It nests in tree hollows with a depth of 1-5m, that are predominately Marri (Corymbia calophylla), Jarrah (Eucalyptus marginata) and Karri (Eucalyptus diversicolor) and it feeds primarily on the seeds of Marri.	Likely to be an intermittent visitor
Dasyurus geoffroii	Chuditch, Western Quoll	The Chuditch have been known to occupy a wide range of habitats including woodlands, dry sclerophyll forests, riparian vegetation, beaches and deserts. They are opportunistic feeders, and forage on the ground at night, feeding on invertebrates, small mammals, birds and reptiles.	Highly Unlikely – not suitable habitat
Falco hypoleucos	Grey Falcon	The Grey Falcon favours timbered lowland plains, particularly acacia shrublands that are crossed by tree-lined watercourses, but frequents other grassland and woodland habitats (Birdlife International, 2014a).	Highly Unlikely – not typical habitat and last recorded in 1929
Leipoa ocellata	Mallee Fowl	Mallee fowl have been found in mallee regions of southern Australia from approximately the 26th parallel of latitude southwards in mallee bushland.	No – not mallee habitat
Macrotis lagotis	Bilby, Dalgyte, Ninu	The greater Bilby is a nocturnal omnivorous marsupial that shrub species, such as *Acacia kempeana* and A. *hilliana*, which have root-dwelling larvae that provide a constant food source for the Greater Bilby. They also utilise Spinifex hummocks which are quite uniform and discrete, providing runways between hummocks, enabling easier movement and foraging.	No – outside of species range
Setonix brachyurus	Quokka	Quokkas were originally very common on the Swan Coastal Plain, however, their distribution is now limited to Rottnest Island and a few isolated areas in the south-west of WA. On the mainland, they prefer densely vegetated areas around wetlands and streams, whereas on Rottnest Island they inhabit low scrubby coastal vegetation where water is not readily available year-round.	No - thought to be locally extinct and the site is too disturbed
Sternula nereis nereis (Sterna nereis nereis)	Australian Fairy Tern	The Fairy Tern (Australian) nests on sheltered sandy beaches, spits and banks above the high tide line and below vegetation.	Highly Unlikely – not suitable habitat

Scientific Name	Common Name	Habitat*	Likelihood to Occur on the Site
Westralunio carteri	Carter's Freshwater Mussel	Carter's Feshwater Mussel is South-West Western Australia's only freshwater mussel (Murdoch University & SERCUL, 2012). Carter's Freshwater Mussel occurs in freshwater streams, rivers, reservoirs and lakes (ICUN, 2015b) and is intolerant to dehydration for more than three days and salinity (Murdoch University & SERCUL, 2012).	Highly Unlikely – not suitable habitat
Schedule 5 – International Agreement			
Charadrius leschenaultii	Greater Sand Plover	In Australasia, the Greater Sand Plover is almost entirely coastal, inhabiting littoral and estuarine habitats. They mainly occur on sheltered sandy, shelly or muddy beaches with large intertidal mudflats or sandbanks, as well as sandy estuarine lagoons.	Highly Unlikely – not coastal habitat
Actitis hypoleucos	Common Sandpiper	The Common Sandpiper is mostly found around muddy margins or rocky shores. Generally the species forages in shallow water and on bare soft mud at the edges of wetlands.	Unlikely – not typical habitat and the site is too disturbed
Apus pacificus	Fork-tailed Swift	The Fork-tailed Swift is almost exclusively aerial and is not known to breed in Australia. They are seen in inland plains but sometimes above foothills or in coastal areas. They often occur over cliffs and beaches and also over islands and sometimes well out to sea. They also occur over settled areas, including towns, urban areas and cities. *Apus pacificus* subsp. *pacificus* is the only subspecies to migrate to Australia.	Highly Unlikely – may fly overhead but unlikely to land
Arenaria interpres	Ruddy Turnstone	The Ruddy Turnstone is mainly found on coastal regions with exposed rock coast lines or coral reefs. It also lives near platforms and shelves, often with shallow tidal pools and rocky, shingle or gravel beaches.	Highly Unlikely – not suitable habitat
Calidris acuminata	Sharp-tailed Sandpiper	The Sharp-tailed Sandpiper prefers muddy edges of shallow fresh or brackish wetlands, with inundated or emergent sedges, grass, saltmarsh or other low vegetation.	Unlikely – not typical habitat and the dam is too disturbed
Calidris alba	Sanderling	Sanderlings occur on most of the coast from Eyre to Derby, and also around Wyndham. They are more often recorded on the south and southwest coasts, north to around southern Shark Bay, with more sparsely scattered records further north in Gascoyne and Pilbara Regions and the Kimberley Division.	Highly Unlikely – not suitable habitat
Calidris melanotos	Pectoral Sandpiper	The Pectoral Sandpiper prefers shallow fresh to saline wetlands and is found at coastal lagoons, estuaries, bays, swamps, lakes, inundated grasslands, saltmarshes, river pools, creeks, floodplains and artificial wetlands.	Unlikely – not typical habitat and the site is too disturbed

Scientific Name	Common Name	Habitat*	Likelihood to Occur on the Site
Calidris ruficollis	Red-necked Stint	The Red-necked Stint is mostly found in coastal areas, including in sheltered inlets, bays, lagoons and estuaries with intertidal mudflats, often near spits, islets and banks and, sometimes, on protected sandy or coralline shores.	Highly Unlikely – not suitable habitat
Calidris subminuta	Long-toed Stint	The Long-toed Stint prefers shallow freshwater or brackish wetlands including lakes, swamps, river floodplains, streams, lagoons and sewage ponds. The species is also fond of areas of muddy shoreline, growths of short grass, weeds, sedges, low or floating aquatic vegetation, reeds, rushes and occasionally stunted samphire.	Unlikely – not typical habitat and the site is too disturbed
Hydroprogne caspia (Sterna caspia)	Caspian Tern	The Caspian Tern is mostly found in sheltered coastal embayments (harbours, lagoons, inlets, bays, estuaries and river deltas) and those with sandy or muddy margins are preferred.	Highly Unlikely – not suitable habitat
Limosa lapponica	Bar-tailed Godwit	The Bar-tailed Godwit is found mainly in coastal habitats such as large intertidal sandflats, banks, mudflats, estuaries, inlets, harbours, coastal lagoons and bays.	Highly Unlikely – not suitable habitat
Limosa limosa	Black-tailed Godwit	The Black-tailed Godwit is found mainly in coastal habitats such as large intertidal sandflats, banks, mudflats, estuaries, inlets, harbours, coastal lagoons and bays. It is found often around beds of seagrass and, sometimes, in nearby saltmarsh.	Highly Unlikely – not suitable habitat
Motacilla cinerea	Grey Wagtail	The Grey Wagtail is mostly recorded in coastal areas in Western Australia (ALA, 2015) however is widespread. There is non-breeding habitat only in Australia and the species has a strong association with water, particularly rocky substrates along water courses but also lakes and marshes.	Highly Unlikely – not suitable habitat
Pandion cristatus (Pandion haliaetus)	Osprey	Ospreys occur in littoral and coastal habitats and terrestrial wetlands of tropical and temperate Australia and offshore islands. They feed on fish, especially mullet where available, and rarely take molluscs, crustaceans, insects, reptiles, birds and mammals.	Highly Unlikely – not suitable habitat
Plegadis falcinellus	Glossy Ibis	The Glossy Ibis is the smallest ibis known in Australia. This species preferred habitat for foraging and breeding are fresh water marshes at the edges of lakes and rivers, lagoons, flood-plains, wet meadows, swamps, reservoirs, sewage ponds, rice-fields and cultivated areas under irrigation but do not breed in South-west Western Australia.	Unlikely – not typical habitat and the site is too disturbed

Scientific Name	Common Name	Habitat*	Likelihood to Occur on the Site
Pluvialis squatarola	Grey Plover	Grey Plovers occur almost entirely in coastal areas, where they usually inhabit sheltered embayments, estuaries and lagoons with mudflats and sandflats, and occasionally on rocky coasts with wave-cut platforms or reef-flats, or on reefs within muddy lagoons.	Highly Unlikely – not coastal habitat
Thalasseus bergii (Sterna bergii)	Crested Tern	The Crested Tern occurs in coastal areas (Birdlife Australia, 2018).	Highly Unlikely – not coastal habitat
Tringa glareola	Wood Sandpiper	The Wood Sandpiper uses well-vegetated, shallow, freshwater wetlands, such as swamps, billabongs, lakes, pools and waterholes. They are typically associated with emergent, aquatic plants or grass, and dominated by taller fringing vegetation, such as dense stands of rushes or reeds, shrubs, or dead or live trees, especially Melaleuca and River Red Gums Eucalyptus camaldulensis and often with fallen timber.	Highly Unlikely – not suitable habitat
Tringa nebularia	Common Greenshank	The Common Greenshank is a wader and does not breed in Australia. This species can be found in many types of wetlands and has the widest distribution of any shorebird in Australia. This species typically feeds on molluscs, crustaceans, insects, and occasionally fish and frogs.	Highly Unlikely – not suitable habitat
Tringa stagnatilis	Marsh Sandpiper, Little Greenshank	The Marsh Sandpiper lives in permanent or ephemeral wetlands of varying salinity, including swamps, lagoons, billabongs, saltpans, saltmarshes, estuaries, pools on inundated floodplains, and intertidal mudflats and also regularly at sewage farms and saltworks.	Highly Unlikely – not suitable habitat
Schedule 6 – Conservation Dependent			
Cacatua pastinator pastinator	Muir's Corella	Muir's Corella occurs in eucalyptus woodlands that are dominated by White Gum (*Eucalyptus wandoo*), Marri (*Corymbia calophylla*), or Jarrah (*Eucalyptus marginata*). The subspecies often occurs in farmland, especially in croplands and sometimes pasture, where there are ample watering points and some nearby large trees for roosting or breeding.	Unlikely – species generally occurs in the Wheatbelt
Phascogale tapoatafa wambenger	South-western Brush-tailed Phascogale, Wambenger	Southern Brush-tailed Phascogales are arboreal marsupials which require tree hollows in suitable woodland or forest and rely on abundant invertebrate prey to sustain populations (Pescott, 2012).	Highly Unlikely – not suitable habitat and too disturbed

Scientific Name	Common Name	Habitat*	Likelihood to Occur on the Site
Schedule 7 – Other Specially Protected Species			
Falco peregrinus	Peregrine Falcon	The Peregrine Falcon is found in a variety of habitats but nests on high cliff ledges or artificial structures. It feeds primarily on small-medium sized birds, but occasionally taking insects, such as moths, cicadas and locusts (Birdlife Australia, 2012).	Highly Unlikely – not suitable habitat
Marine			
Ardea alba	Great Egret, White Egret	The Eastern Great Egret has been reported in a wide range of wetland habitats and usually frequents shallow waters. This species feeds on fish, insects, crustaceans, molluscs, frogs, lizards, snakes and small birds and mammals.	Highly Unlikely – not suitable habitat
Egretta sacra	Eastern Reef Egret, Eastern Reef Heron	The Eastern Reef Egret nests in trees in island woodlands, or on the ground under shrubs or rock ledges and feeds on small fish, crustaceans and insects (Birdlife Australia, 2014).	Highly Unlikely – not suitable habitat
Himantopus himantopus	Black-winged Stilt	The Black-winged Stilt is found near coastal lagoons and shallow freshwater or brackish pools with extensive areas of mudflats, salt meadows, saltpans, coastal marshes and swamps (Birdlife International, 2014b).	Highly Unlikely – not suitable habitat
Merops ornatus	Rainbow Bee-eater	Populations of the Rainbow Bee-eater that breed in northern Australia are considered to be resident, and in many northern localities the Rainbow Bee-eater is present throughout the year. The Rainbow Bee-eater nests in a burrow dug in the ground. It is found across the better-watered parts of WA including islands preferring lightly wooded, sandy country near water.	Possible intermittent visitor
Recurvirostra novaehollandiae	Red-necked Avocet	The Red-necked Avocet occurs in wetland areas including bogs, marshes, swamps and Permanent Saline, Brackish or Alkaline Lakes (Birdlife International, 2014c).	Highly Unlikely – not suitable habitat
Priority 1			
Ixobrychus flavicollis australis (southwest subpop.)	Australian Black Bittern (southwest pop)	The bittern sub-species prefer wetland habitats with dense fringing vegetation. They are found in reed beds along water bodies. They inhabit ponds, lakes, streams and marshes. Their breeding habitat is mostly reed beds. The subspecies I. f. australis is distributed in New Guinea, Bismarck Archipelago and Australia (BirdLife International, 2015b).	Highly Unlikely – not suitable habitat
Kawaniphila pachomai	Grey Vernal Katydid (southwest)	The *Kawaniphila pachomai* species of cricket has been recorded in Karragullen and Witchcliffe which are forested areas.	Highly Unlikely – not suitable habitat

Scientific Name	Common Name	Habitat*	Likelihood to Occur on the Site
Priority 2			
Austrosaga spinifer	Spiny Katydid (Swan Coastal Plain)	The Austrosaga spinifer species of cricket is recorcded from Cervantes (Rentz, 1996).	Highly Unlikely – not recorded in the area
Glossurocolletes bilobatus (Previously Leioproctus bilobatus)	A Short-tongued Bee (southwest)	The *Glossurocolletes bilobatus* bee species is known to utilise the yellow flowering pea, *Gompholobium aristatum* (Phoenix, 2010).	Highly Unlikely – not suitable habitat
Priority 3			
Acanthophis antarcticus	Southern Death Adder	Southern Death Adders inhabit a range of habitats, including rainforest, scrubland, semi arid zones and rocky outcrops. Typically during the day they remain mostly buried beneath sand, soil or debris, with just the tail and top of the head exposed. They do not actively hunt their prey but are cryptic snakes which sit motionlessly, sometimes for months on end, constantly watching for any animal which unwittingly comes within striking distance (Pilbara Pythons, 2014).	Unlikely – the site is too disturbed
Australotomurus morbidus	Cemetery Springtail, Guildford Springtail	The Cemetery Springtail is known from four locations in Perth in relatively undisturbed bushland in pale soils in *Banksia* and *Eucalyptus* woodland (Greenslade and Jordan, 2014).	Highly Unlikely – the site is too disturbed
Ctenotus gemmula (Swan Coastal Plain pop)	Jewelled South-west Ctenotus	The Jewelled south-west Ctenotus inhabits sand plains with heaths. It is also found in Banksia or Mallee woodlands (ICUN, 2015).	Highly Unlikely – not suitable habitat
Geotria australis	Pouched Lamprey	The Pouched Lamprey is spawned in freshwater systems and then migrate to sea before returning to freshwater to spawn and die (OzFishNet, 2014).	No – not suitable habitat
Hylaeus globuliferus	Woolybush Bee	The Woolybush Bee is thought to favour flowers of *Adenanthos cygnorum* for feeding, but has also been recorded on *Banksia attenuata*.	Unlikely – not typical habitat
Idiosoma sigillatum	Swan Coastal Plain shield-backed trapdoor spider	The Swan Coastal Plain Shield-backed Trapdoor Spider arranges fallen twigs from the sheoak tree around the rim of its burrow entrance, enabling it to feel the vibrations of unsuspecting prey that wander by (Curtin, 2018).	Highly Unlikely – not suitable habitat
Lerista lineata	Perth Slider, Lined Skink	The Lined Skink is a burrowing species that occurs in pale sandy soils with coastal heath and shrubland areas in isolated populations in the south-west and mid-west coast of Western Australia. It feeds on termites and other small insects (AROD, 2014).	Highly Unlikely – not suitable habitat

Scientific Name	Common Name	Habitat*	Likelihood to Occur on the Site
Neelaps calonotos	Black-striped Snake	The Black-striped snake has a limited distribution, inhabiting areas with sandy soils that support heathlands and Banksia/Eucalypt Woodlands (Nevill, 2005) on the Swan Coastal Plain generally in the lower west coast from Lancelin to Mandurah (Storr et al, 1999).	Unlikely – not typical habitat
Priority 4			
Ctenotus delli	Dell's Ctenotus, Darling Range Heath Ctenotus	Dell's Ctenotus is found in the north Darling Range of south-western WA in dry sclerophyll forests on stony hills and ranges (Cogger, 2014).	Highly Unlikely – not suitable habitat
Falsistrellus mackenziei	Western False Pipistrelle	The Western False Pipistrelle occurs in high rainfall Jarrah, Karri and Tuart forests and coastal woodlands. They roost in hollows of trees, branches and stumps, and are insectivorous, feeding at night between the canopy and understorey of tall forest trees (Environment Australia, 1999).	Highly Unlikely – not suitable habitat
Hydromys chrysogaster	Water-rat, Rakali	The Water Rat generally prefers wetland habitats characterised by dense, low-lying vegetation (0–30 cm from ground), low-density canopy cover and shallow, narrow water bodies (Speldewinde et al., 2013).	Highly Unlikely – not suitable habitat
Isoodon fusciventer	Southern Brown Bandicoot, Quenda	Southern Brown Bandicoots are small grey marsupials that prefer dense scrub (up to one metre high). Their diet includes invertebrates (including earthworms, adult beetles and their larvae), underground fungi, subterranean plant material, and very occasionally, small vertebrates (DEC, 2012b).	Possibly intermittently present on the site
Ixobrychus dubius	Australian Little Bittern	The Australian Little Bittern is mainly found in freshwater wetlands, where they inhabit dense emergent vegetation of reeds and sedges, and inundated shrub thickets. They are also occasionally found in brackish and saline wetlands such as mangrove swamps, Juncus-dominated salt marsh and the wooded margins of coastal lagoons (Naturewatch NZ, 2014).	Highly Unlikely – not suitable habitat
Notamacropus eugenii derbianus	Tammar Wallaby	The Tammar Wallaby prefers dense, low vegetation for daytime shelter and open grassy areas for feeding. This species inhabits coastal scrub, heath, dry sclerophyll forest and thickets in mallee and woodland (DEC, 2012c).	Unlikely – the site is too disturbed
Notamacropus irma	Western Brush Wallaby	The Western Brush Wallaby is a medium sized marsupial and its optimum habitat is open forest or woodland, particularly favouring open, seasonally wet flats with low grasses and open scrubby thickets (DEC, 2012d).	Unlikely – the site is too disturbed

Scientific Name	Common Name	Habitat*	Likelihood to Occur on the Site
Oxyura australis	Blue-billed Duck	The Blue-billed Duck is found on terrestrial wetlands in temperate regions, that are freshwater to saline, and may be natural or artificial. It nests in rushes, sedges, Lignum *Muehlenbeckia cunninghamii* and paperbark *Melaleuca* (Birdlife International, 2015c). The species is almost completely aquatic, and is seldom seen on land. Non-breeding flocks, often with several hundred individuals, congregate on large, deep open freshwater dams and lakes in autumn (Birds in Backyards, 2015).	Highly Unlikely – not suitable habitat
Platycercus icterotis xanthogenys	Western Rosella (inland ssp)	The wheatbelt subspecies of Western Rosella lives in woodland, and its persistence is associated with habitat remnants. The main food of this subspecies is the seeds of casuarinas, but it also takes seeds from grass, weedy herbs and fruit. This species nests in tree hollows (SEWPaC, 2000).	Highly Unlikely – not suitable habitat and outside of the species main range
Synemon gratiosa	Graceful Sun-moth	The Graceful Sun-moth is a diurnal moth with dull coloured brown to black forewings and brightly coloured orange hind wings. The larvae burrow into the rhizomes of *Lomandra maritima* and *Lomandra hermaphrodita* exclusively and therefore require the presence of one or both of these species to be present in an area (Bishop *et al*., 2011).	No – no suitable habitat

* Habitat descriptions from DoEE (2016) SPRAT Database unless otherwise denoted

Habitat on the site was identified for three listed species of Black Cockatoos being:

- Carnaby's Black Cockatoo (*Calyptorhynchus* (*Zanda*) *latirostris*)
- Baudin's Black Cockatoo (*Calyptorhynchus* (*Zanda*) *baudinii*)
- Forest Red-tailed Black Cockatoo (*Calyptorhynchus banksii naso*)

The Open Woodland Habitat containing Flooded Gum and Wandoo provides foraging habitat for Black Cockatoos as does the small area containing Banksia trees in the old road reserve (Valentine and Stock, 2008; Groom, 2011). Detailed analysis of the Black Ccokatoo habitat on the site is provided in Section 5.

The Southern Brown Bandicoot, Quenda (*Isoodon fusciventer*) (Priority 4) could potentially occur on the site.

The Rainbow Bee-eater (*Merops ornatus*), listed Marine under the EPBC Act, may potentially utilise some sections of the site as part of a much larger home range though only likely to occur infrequently.

4.5 Pest Fauna

There are several pest species that may be present on the site outlined in Table 9.

Table 2: Pest Species Likely to Occur on the Site

Taxa	Family	Species Name	Common Name
Mammalia	Canidae	*Vulpes vulpes*	Red fox
	Felidae	*Felis catus*	Feral cat
	Leporidae	*Oryctolagus cuniculus*	European Rabbit
	Muridae	*Mus musculus*	House Mouse
		Rattus rattus	Black Rat

4.6 Biodiversity Value

The EPA's (2002) *Terrestrial Biological Surveys as an Element of Biodiversity Protection Position Statement No. 3* indicated an ecological assessment of a site must consider its biodiversity value at the genetic, species and ecosystem levels; and its ecological functional value at the ecosystem level. The vegetation on the site is largely undisturbed, however there is likely to be introduced feral species such as foxes, cats and rabbits which would have modified the fauna assemblage from pre-European settlement.

5 BLACK COCKATOO HABITAT ASSESSMENT

5.1 Black Cockatoo Species

5.1.1 Carnaby's Black Cockatoo (Zanda (Calyptorhynchus) latirostris)

Carnaby's Black Cockatoo is found in the south-west of Australia from Kalbarri through to Ravensthorpe. It has a preference for feeding on the seeds of *Banksia, Hakea, Eucalyptus, Grevillea, Pinus* and *Allocasuarina* spp. It is nomadic, often moving toward the coast after breeding. It breeds in tree hollows that are 2.5 – 12m above the ground and have an entrance of 23-30cm with a depth of 1-2.5m. Nesting mostly occurs in smooth-barked trees (e.g. Salmon Gum, Wandoo, Red Morrell). Eggs are laid from July to October, with incubation lasting 29 days (DoE, 2014).

The study area Is inside the boundary of the modelled distribution for Carnaby's Black Cockatoos (SEWPaC, 2012). The study area is shown as being within the buffer of a confirmed roost site but is not within a confirmed breeding area (National Map, 2022).

5.1.2 Baudin's Black Cockatoo (Zanda (Calyptorhynchus) baudinii)

Baudin's Black Cockatoo is most common in the far south-west of Western Australia. It is known to breed from the southern forests north to Collie and east to near Kojonup. Baudin's Black Cockatoo is typically found in vagrant flocks and utilises the taller, more open Jarrah (*Eucalyptus marginata*) and Marri (*Corymbia calophylla*) woodlands where it feeds mainly on Marri seeds and various Proteaceous species (Johnstone, Johnstone and Kirkby, 2011).

The study area is outside the modelled 'distribution for Baudin's Black Cockatoos however the species may be a vagrant visitor to the study area (SEWPaC, 2012).

5.1.3 Forest Red-tailed Black Cockatoo (*Calyptorhynchus banksii naso*)

Forest Red-tailed Black Cockatoos are endemic to the humid to sub-humid south-west of Western Australia (SEWPaC, 2012). The range of Forest Red-tailed Black Cockatoos is bound by Gingin in the north to Mt Helena, Christmas Tree Well, West Dale, North Bannister, Mt Saddleback, Kojonup, Rocky Gully, upper King River and Green Range (east of Albany) (SEWPaC, 2012; DoE, 2014). It nests in tree hollows with a depth of 1-5m, that are predominately Marri, Jarrah and Karri (*E. diversicolor*) and it feeds primarily on the seeds of Marri and Jarrah (Johnstone, Johnstone and Kirkby, 2011).

The study area is inside the modelled distribution for Forest Red-tailed Black Cockatoos (SEWPaC, 2012).

5.2 Methodology

5.2.1 Habitat definitions

Breeding Habitat

'Breeding habitat' is defined as trees of species known to support breeding within the range of the species which either have a suitable nest hollow OR have a DBH of 500mm or greater (DAWE, 2022).

Past studies have found that on average hollow openings are 25 cm x 27 cm (Saunders *et al.,* 1982, Saunders and Dawson, 2017) and 30 cm x 34 cm (Johnstone *et al*., 2013). The height of a hollow

entrance off the ground is on average 19.384 m (Johnstone *et al*., 2013). Nearly all hollows that are used for nesting by Black Cockatoos are located in the main trunk and have a vertical aspect (Johnstone *et al*., 2013, Saunders and Dawson, 2017). Black Cockatoos are large birds with shoulders that are about 100 mm wide, therefore they require hollows with an entrance bigger than this (as shown above they are typically much larger), but the internal dimensions (depth and floor base) need to be much larger in order for it to be suitable to lay eggs in and for adults to be able to move around.

Previous research has found for Carnaby's Black Cockatoo a mean depth of 1.2 m and a floor diameter of 40 cm is required in order for it to be suitable to lay eggs in and for adults to be able to move around (Johnstone *et al*., 2013, Saunders and Dawson 2017).

The Black Cockatoo Referral Guidelines define trees of certain species with a DBH of 300 to 500mm or greater, dependent on the tree species, as breeding habitat regardless of the presence or not of hollows. The theory behind this definition is the concept that while the trees may not currently contain hollows, they are mature enough that in the next 50 years or so a hollow might form and be of use to Black Cockatoos for the purposes of breeding.

Roosting Habitat

'Roosting habitat' is usually evident due to the presence of Black Cockatoos in the survey area in the evening and early morning and if there are scats or moulted feathers under the roosting area. Black Cockatoos utilise a wide range of native and non-native trees, situated within a variety of land-use types. Roosting habitat is generally in tall (average of > 25 m) tree species that have relatively thick trunks (average DBH of 1 m) and medium foliage density (average of 50%), and that are not too densely forested amongst other trees (average tree crown connectivity of 20 %) (Le Roux, 2017). Black cockatoos rely upon the availability of suitable night roosting sites in proximity to foraging resources, and particularly access to water within 2 km of the roost site (SEWPaC, 2012).

Foraging Habitat

'Foraging habitat' for Black Cockatoos is determined from the plant species that are present on the study area and evidence of feeding such as direct observation of birds or by chewed nuts and cones. Foraging plants utilised by each species of Black Cockatoo varies, with Carnaby's Black Cockatoo foraging on Eucalypts, pines and proteaceous species, whereas Forest Red-tailed Cockatoos prefer Eucalypts and Allocasuarina and many exotic species and Baudin's prefer mostly seeds of Marri and Jarrah, also Allocasuarina cones (DAWE, 2022).

5.2.2 Site Survey

PGV Environmental undertook a Black Cockatoo habitat assessment on 9 September 2022 in accordance with the Black Cockatoo Referral Guidelines (DAWE, 2022) and the methodology outlined in the SPRAT Database for each of the Black Cockatoo species.

The study area was traversed on foot and information on Black Cockatoo foraging, roosting and breeding habitat was assessed. The extent, type and quality of the vegetation present, including the presence and extent of plants known to be used by Black Cockatoos was recorded.

5.3 Black Cockatoo Habitat

5.3.1 Breeding

Black Cockatoos are known to breed in hollows of large eucalypts. The site is not known as a breeding site for Black Cockatoos (DoP, 2011; National Map, 2022). The nearest breeding site is approximately 14km to the east (National Map, 2022).

There were 8 trees recorded by PGV Environmental that meet the definition of breeding habitat or potential breeding habitat due to their DBH being >300mm for Wandoo and >500m for Marri (Figure 3, Appendix 2). The total consisted of 7 Wandoo trees and one Marri tree. None of the trees in the study area contained hollows.

5.3.2 Roosting

Black Cockatoos are known to roost overnight in tall trees including native and introduced eucalypts and pine trees generally in close proximity to a fresh water source. The study area contains tall Jarrah trees, however no evidence of roosting was recorded during the survey.

The study area is not mapped as containing a recorded roosting habitat for Black Cockatoos but near several known sites (DoP, 2011; Peck *et al.,* 2018; National Map, 2022). The nearest roosting sites are reported to be around 1.2 km to the south-south-east, 1.5m to the north-east, 1 and 3.4km to the south-east (National Map, 2022) (Figure 4).

5.3.3 Foraging

The study area contains ten species that are recognised as are known to be used for foraging by Black Cockatoos (Table 10) (Davies 1966; Saunders 1980; Johnstone and Storr 1998; Johnstone and Kirkby 1999; Valentine and Stock, 2008; Groom 2011; Johnstone *et al*., 2011; SEWPaC, 2012; Johnstone, *et al.*, 2013; Groom, 2015; Johnstone *et al*., 2016; DAWE, 2022). Some of the species were only represented by one or a few plants such as Marri, Jarrah, Coastal Blackbutt, *Banksia attenuata* and *B. ilicifolia.* Therefore, the main area of foraging habitat is the *Banksia menziesii/Leptospermum laevigatum* Low Open Woodland. *Banksia menziesii* trees are foraged by Carnaby's Black Cockatoos and not the other two species. The total area of foraging habitat is 0.3156ha (Figure 6).

Table 10: Foraging Species for Black Cockatoos

Species	Common Name	Carnaby's Black Cockatoo	Baudin's Black Cockatoo	Forest red-tailed Black Cockatoo
Allocasuarina fraseriana	Slender Banksia	✓		✓
Banksia attenuata	Slender Banksia	✓	✓	
Banksia ilicifolia	Holly-leaved Banksia	✓	✓	
Banksia menziesii	Firewood Banksia	✓	✓	
Casuarina cunninghamiana	River Sheoak	✓		✓
Corymbia calophylla	Marri	✓	✓	✓
Eucalyptus marginata	Jarrah	✓	✓	✓
Eucalyptus todtiana	Coastal Blackbutt	✓	✓	✓
Eucalyptus wandoo	Wandoo	✓	✓	✓
Xanthorrhoea preissii	Grass Tree	✓	✓	✓

The foraging habitat value was not able to be worked out using the scoring tool in the revised Black Cockatoo Referral Guidelines (DAWE, 2022) as the tool can only applies to sites equal to or larger than 1ha. The extent of foraging habitat on the site is calculated to be 0.3156ha.

6 SUMMARY AND CONCLUSION

6.1 Summary

The Flora, Vegetation and Fauna survey of the proposed MRS Amendment Area for Lots 5, 250, 253 and 254 Helena Valley Road, Helena Valley found the following:

- Native vegetation occurs on about 2.8ha of the 18.6ha site;
- Six native vegetation types and one non-native vegetation type were recorded and mapped on the site. Three of the vegetation types were regrowth vegetation in the old Helena Valley Road reserve which is not part of Lots 250 and 254. Four vegetation types were associated with the Kadina Brook environment;
- Most of the vegetation was rated as Degraded to Completely Degraded due to the absence of any native understorey. One area of Very Good *Melaleuca rhaphiophylla* Forest was recorded along Kadina Brook;
- A total of 89 plant species were recorded in the flora survey with 44 native species and 45 (50.5%) introduced species. No Threatened or Priority flora were recorded on the site;
- The small areas of *Banksia menziesii/Leptospermum laevigatum* Low Open Woodland in the old Helena Valley Road reserve is Degraded and therefore does not meet the minimum condition rating to be the Banksia Woodlands of the Swan Coastal Plain Ecological Community;
- The Woodland habitat on the site is considered Good Fauna Habitat due to the connectivity to other vegetation along Kadina Brook. The remainder of the fauna habitats are considered to be Highly Degraded Fauna Habitat;
- The vegetation in the old Helena Valley Road reserve contains a dense cover of Victorian Teatree which is very invasive in dry, sandy soils. The Victorian Teatree is considered a threat to the Threatened Ecological Community (SCP 20a) that occurs in the Bushmead Bushland Bush Forever site located 25m from the site;
- The vegetation in the Kadina Brook environment provides an ecological corridor along other sections of the Brook to the north-west and south-east. The corridor would be predominantly for birds and potentially Quenda;
- The site contains 0.3156ha of foraging habitat for Carnaby's Black Cockatoos and eight potential breeding habitat trees (7 Wandoo and 1 Marri). No trees contained any hollows, therefore breeding does not currently occur on the site;
- The proposed development would clear 0.3156ha of Carnaby's Black Cockatoo foraging habitat and one potential breeding habitat tree;
- The clearing of more than 1ha of Black Cockatoo foraging habitat and one breeding habitat tree may have a significant impact on Carnaby's Black Cockatoo. The amount of foraging habitat is below the threshold level and a single potential breeding habitat tree is a very low impact. Therefore, referral under the Commonwealth EPBC Act may not be required; and
- The site also contains habitat suitable for the Southern Brown Bandicoot (*Isoodon fusciventer*), and Rainbow Bee-eater (*Merops ornatus*).

6.2 Conclusion

The proposed development of Lots 5, 250, 253 and 254 Helena Valley Road is likely to clear all the vegetation in the old Helena Valley Road reserve that is now within Lots 250 and 254. As this vegetation does not have any flora or vegetation values of conservation significance the clearing is considered acceptable.

The proposed development is unlikely to require the clearing of any of the vegetation associated with Kadina Brook.

Therefore, the proposed MRS Amendment to enable urban and commercial development should not have any adverse impacts on the flora, vegetation or fauna values of the site.

Vegetation Condition

- Very Good
- Degraded
- Completely Degraded

Vegetation Condition
(SOURCE: Bush Forever, Govt. of W.A., 2000)

P - Pristine
Pristine or nearly so, no obvious signs of disturbance.

Ex - Excellent
Vegetation structure intact, disturbance affecting individual species and weeds are non aggressive species.

VG - Very Good
Vegetation structure altered, obvious signs of disturbance. For example, disturbance to vegetation structure caused by repeated fires, the presence of some more aggressive weeds, dieback, logging and grazing.

G - Good
Vegetation structure significantly altered by very obvious signs of multiple disturbance. Retains basic vegetation structure or ability to regenerate it. For example, disturbance to vegetation structure caused by very frequent fires, the presence of some very aggressive weeds at high density, partial clearing, dieback and grazing.

D - Degraded
Basic vegetation structure severely impacted by disturbance. Scope for regeneration but not to a state approaching good condition without intensive management. For example, disturbance to vegetation structure caused by very frequent fires, the presence of very aggressive weeds, partial clearing, dieback and grazing.

CD - Completely Degraded
The structure of the vegetation is no longer intact and the areas is completely or almost completely without native species. These areas are often described as 'parkland cleared' with the flora composing weed or crop species with isolated native trees or shrubs.

Cl - Cleared
No native vegetation remaining.

1. Introduction

1.1 Context and Background

This Weed Control Program and Vegetation Condition Assessment Report (Report) is intended to outline the management actions for weed control throughout the 335 Helena Valley site (Site) as outlined in Figure 1.

Figure 1. The 335 Helena Valley site.

Gambara was engaged by Western Environmental in October 2025 to undertake a site survey and inspection of site to record and assess the following criteria:

- Weed load across the site.
- Weed species present within the site.
- Exact extent of native vegetation edge.
- Identification and recording of native trees greater than 30 cm in diameter at breast height (DBH).
- Indicative revegetation zones.
- Vegetation condition of the site.

Gambara undertook the site inspection/survey on 20th of November 2025.

1.2 Objective

The objective of the site survey and inspection is to identify the level of weed load across the site, identify the edge of the native vegetation including trees with 30 cm DBH within 10 metres of the interface between native vegetation and paddock, identify indicative revegetation zones and assess vegetation condition of the site.

1.3 Approach

This site survey and inspection was undertaken by on-foot traversal of the entire Site. Two Gambara personnel remained 5 metres apart and traversed back and forth across the site until the entire native vegetation area was inspected.

Gambara utilised the ArcGIS programs QuickCapture and Field Maps to record data on site. This included the following:

- Native vegetation edge.
- Native trees >30 cm DBH.
- Weed load levels across the site (ratings as described in Section 2.3).
- Vegetation conditions ratings across the site (ratings as described in Section 3).

Gambara recorded weed species identified on site, including any Declared Pests or Weeds of National Significance (as described in Table 1). Gambara provides a description, proposed controls and control timings for each significant weed species identified in Section 2.

Table 1. Control Requirements under Biosecurity and Agriculture Management Act 2007.

Declaration category	Requirements
Weeds of National Significance	A set of 32 weeds which have been agreed by Australian governments based on an assessment process that prioritised these weeds based on their invasiveness, potential for spread, environmental, social and economic impacts. Weeds are listed via Department of Agriculture, Water & Environment. Management of these weeds is legislated at a State level.
Declared Pests	To protect Western Australian agriculture the Department of Primary Industries and Regional Development regulates harmful plants under the *Biosecurity and Agriculture Management Act 2013*. If a Declared Pest is found in the area, land owners/occupiers and other persons must adhere to requirements under the Biosecurity and Agriculture Management Act 2007 and its subsidiary legislation. Exclusion or control categories are set for each Declared Pests via local government boundaries. These categories are: C1 & C2-Control measures to destroy, prevent or eradicate the weed C3-Reduces the number or contains the spread of the pest in the area.
Environmental/General Weeds	General weeds that invade bushland and threaten native plants. No legislative requirements under the Biosecurity and Agriculture

Declaration category	Requirements
	Management Act 2007. Control advised to reduce environmental harm and achieve Ministerial Statement 1156 Condition 8-2(2).

2. Weed Species and Controls

2.1 Baseline Assessment

The following section provides a list of significant weed species that were identified during the Gambara field survey. This survey was undertaken on the 20th of November 2025. This survey was undertaken by Gambara Project Coordinator Jye McLeish and Gambara Supervisor Dillon Newman. A brief description of the weed species and a representative photograph of the weed is provided.

During the baseline assessment, a total of 19 significant environmental weed species were identified within the Project Area. The following weed species present are a Declared Pests (DP)/Weed of National Significance (WoNS).

- *Anredera cordifolia* (Madeira Vine) – WoNS.
- *Echium plantagineum* (Patterson's Curse) – DP.
- *Gomphocarpus fruticosus* (Narrow-leaf Cotton Bush) – DP.
- *Zantedeschia aethiopica* (Arum Lily) – DP.

2.1.1 *Anredera cordifolia*

Madeira Vine (*Anredera cordifolia*) is a perennial, twining or climbing vine growing over taller plants and trees up to 30 m tall. The leaves are alternately arranged, slightly fleshy, hairless and sometimes appears glossy. Produces masses of dropping flower clusters. Each cluster bears numerous small white or cream coloured fragrant flowers turning dark brown or black in colour with age. Flowering occurs from February to May.

Plate 1: Photograph of *Anredera cordifolia.*
Taken by Dillon Newman on the 25th of November 2025 within the Helena Valley Site.

2.1.2 *Avena fatua*

Common Wild Oat (*Avena fatua*) is an erect annual grass growing to 60-90 cm tall. The plant possesses loose panicle of large spikelets that droop in fruit. Spikelets are 18-25 mm long. Mature plants have lemmas clothed at base with silky brown hairs. Grains are 6-8 mm long. Seeds are viable for 3-8 years.

Plate 2. Photograph of *Avena fatua.* Taken by Dillon Newman on the 25th of November 2025 within the Helena Valley Site.

2.1.3 *Cynodon dactylon*

Couch Grass (*Cynodon dactylon)* is a tough creeping or erect mat-forming perennial grass with stolons (runners/horizontal stems) and rhizomes (underground stems). The flower-heads are like the spokes of an umbrella or windmill, with up to 6 spikes radiating from the end of the flower stalk. The spikes are usually straight, but they are sometimes slightly curved. The spikelets are overlapping and arise in 2 rows on the underside of the spikes, are up to 2 mm long and have one floret each. Flowering in summer and autumn.

Plate 3. Photograph of *Cynodon dactylon.* Taken by Dillon Newman on the 25th of November 2025 within the Helena Valley Site.

2.1.4 *Cenchrus clandestinus*

Kikuyu grass (*Cenchrus clandestinus*) is a perennial grass with matted roots. The leaves are green, flattened or upwardly folded. The flowering stems are short and hidden amongst leaves.

Plate 4. Photograph of *Cenchrus clandestinus*. Taken by Dillon Newman on the 25th of November 2025 within the Helena Valley Site.

2.1.5 *Echium plantagineum*

Patterson's Curse (*Echium plantagineum*) is an annual herb which grows up to 120 cm high. It has several stems that arise from a stout taproot and a large rosette of leaves at the base of the plant, Stems and leaves are covered in hairs. The flowers are trumpet shaped, pink in the bud and purple to blue when opened. Fruit consists of a group of four seeds. Is brown to grey in colour. Flowering occurs between September to January.

Plate 5. Photograph of *Echium plantagineum.* Taken by Dillon Newman on the 25th of November 2025 within the Helena Valley Site.

2.1.6 *Ficus carica*

The Common Fig (*Ficus carica*) is a small winter deciduous tree growing up to 10 m high. The leaves are light or dark green with three or five lobes. Fruit grows on the stem in clusters of two to six and range from green, purple or yellow depending on growth stage. Flowering occurs from November to January.

Plate 6. Photograph of *Ficus carica*. Taken by Dillon Newman on the 25th of November 2025 within the Helena Valley Site.

2.1.7 *Fumaria capreolata*

Whiteflower Fumitory (*Fumaria capreolata*) is a climbing or scrambling annual herb. It is a low spreading creeper that sprawls and entwines over native vegetation. It has wedge shaped bright green leaves and trailing stems. The flower is white in colour with reddish/black tips and tubular in shape. Flowering occurs between May to September.

Plate 7. Photograph of *Fumaria capreolata* Taken by Dillon Newman on the 25th of November 2025 within the Helena Valley Site.

2.1.8 *Gomphocarpus fruticosus*

Narrow-leaf Cottonbush (*Gomphocarpus fruticosus)* is an erect perennial shrub growing up to approximately 1.5 m high. It produces creamy white flowers in summer, and the pale green inflated seed pods are covered with spines that burst open to reveal a cottony mass of seeds. Leaves are lance shaped and light green. Flowering occurs from December to July.

Plate 8. Photograph of *Gomphocarpus fruticosus.* Taken by Dillon Newman on the 25th of November 2025 within the Helena Valley Site.

2.1.9 *Lotus subbiflorus*

Hairy Bird's-foot Trefoil (*Lotus subbiflorus*) is an open, sprawling annual herb. Trailing or ascending to 60 cm tall. Stems covered with long soft hairs. Three leaf clover like leaflets are narrow and oval. Clusters of two to four yellow pea-type flowers. Flowering occurs between August to February.

Plate 9. Photograph of *Lotus subbiflorus.* Taken by Dillon Newman on the 25th of November 2025 within the Helena Valley Site.

2.1.10 Lupinus cosentinii

Blue Lupin (*Lupinus cosentinii*) is a robust, multi-branched annual herb growing up to 1.4 m high. Covered in whitish silky hairs. Leaves compound of 7-13 oblong leaflets forming a fan shape. Flowers are blue and pea-shaped and form in clusters. Seeds are elongated, pods 4-6 cm long, covered in dense hair and containing 3-5 greyish seeds. Flowering occurs between August to November.

Plate 10. Photograph of *Lupinus cosentinii.* Taken by Dillon Newman on the 25th of November 2025 within the Helena Valley Site.

2.1.11 Mentha spp

Peppermint (*Mentha spp*) is a hardy perennial herb growing up to 120 cm tall. Leaves are arranged in opposite pairs. Leaves range from dark green and grey green to purple, blue and sometimes pale yellow. The flowers form in long bracts. They are white to purple. The fruit is a nutlet, containing one to four seeds.

Plate 11. Photograph of *Mentha spp.* Taken by Dillon Newman on the 25th of November 2025 within the Helena Valley Site.

2.1.12 *Phytolacca octandr*a

Inkweed (*Phytolacca octandra*) is a short-lived perennial, woody based, hairless herb growing up to 2m high and sometimes tinged with red. The oval leaves are 25 cm long. It has several spikes of small greenish white flowers. The flowers have 5 petal-like sepals each 2.5-4 mm long. The fruits are reddish black succulent berries and produce red juice (ink) when ripe and crushed. Flowering occurs between August and September.

Plate 12. Photograph of *Phytolacca octandra.* Taken by Jye McLeish on the 25th of November 2025 within the Helena Valley Site.

2.1.13 *Pinus pinaster*

Maritime Pine (*Pinus pinaster*) is a monoecious tree growing up to 40 m high. Sparsely branched with bare stems and thick, reddish brown or dark purple bark in small squares. Leaves in pairs 25 cm long, rigid and curved, dull grey. Cones up to 18 cm long, rich shining brown.

Plate 13. Photograph of *Pinus pinaster.* Taken by Dillon Newman on the 25th of November 2025 within the Helena Valley Site.

2.1.14 *Ricinus communis*

Castor Oil Plant (*Ricinus communis*) is a large robust shrub often growing 3 meters or more in height. It is thick, hollow, hairless stems bear large leaves up to 70 cm across. Young leaves are often dark red or purplish in colour and usually somewhat glossy in appearance, while older leaves are green or bluish-green in colour. Flowers are borne in elongated clusters (8-15 cm long), with the reddish female flowers on top and the yellowish male flowers below. Its capsules (10-30 mm across) are greenish to bright red when young and covered in soft, blunt spines.

Plate 14. Photograph of *Ricinus communis*. Taken by Dillon Newman on the 25th of November 2025 within the Helena Valley swamp property.

2.1.15 *Solanum nigrum*

Blackberry Nightshade (*Solanum nigrum*) is an annual (and sometimes perennial) herbaceous plant, that grows between 0.1 and 1 meter in height. It can vary widely in its growth form, with stems either erect or spreading and occasionally prostrate. Stems are smooth or very sparsely hairy, becoming woody with age. Leaves generally dark green to purple-green in colour. Flowers are star shaped, white with five petals fused at the base with yellow centres (8 to 12 mm diameter). Fruit is a shiny berry that is dark green when initially produced and changing to purple-black when ripe.

Plate 15. Photograph of *Solanum nigrum.* Taken by Jye McLeish on the 25th of November 2025 within the Helena Valley Site.

2.1.16 *Rumex obtusifolius*

Dock Weed (*Rumex obtusifolius*) is a taproot perennial herb growing up to120 cm tall. It has a basal of rosette leaves, some of the lower leaves have red stems. The leaves have stalks longer than the blade. Flowers come in clusters that spread along the branches and appear green. The fruit heads become rusty brown in colour.

Plate 16. Photograph of *Rumex obtusifolius.* Taken by Jye McLeish on the 25th of November 2025 within the Helena Valley Site.

2.1.17 *Schinus terebinthifolius*

Brazilian Peppertree (*Schinus terebinthifolius*) is a large spreading tree growing up to 10 m tall. Branches can be upright, reclining, or nearly vine-like. Leaves are dark green and alternate, pinnately compound with 5-15 leaflets. Flowers are small, whitish and growing at the end of branches. Fruit forms in bunches and appear red and glossy. Flowering occurs between February to April, and fruit occurs between March to July

Plate 17. Photograph of *Schinus terebinthifolius.* Taken by Jye McLeish on the 25th of November 2025 within the Helena Valley Site.

2.1.18 *Watsonia meriana var bulbillifera*

Watsonia (*Watsonia meriana var bulbillifera*) is a cormous perennial herb growing up to 2.5 m tall. Produces dense stands of light green, sword-shaped leaves. Leaves are up to 1m long and 5cm wide. Flower stems are slender, reddish and usually less than 2 m tall. Flowers are orange to red and tubular in shape. Flowering occurs between October to December.

Plate 18. Photograph of *Watsonia meriana var bulbillifera.*
Taken by Jye McLeish on the 25th of November 2025 within the Helena Valley Site.

2.1.19 *Zantedeschia aethiopica*

Arum lily (*Zantedeschia aethiopica*) is a perennial herb forming in clumps growing up to1.5 m tall. It has a stout rootstock or short, thick underground stem. Large arrowhead-shaped leaf blades are glossy and dark green. Flower structure has a central spike bearing tiny, tightly packed pale yellow to orange flowers. This is surrounded by a white to ivory funnel-like bract. Flowering occurs between July to November.

Plate 19. Photograph of *Zantedeschia aethiopica.*
Taken by Dillon Newman on the 25th of November 2025 within the Helena Valley Site.

2.2 Control Measures

The weed species, control measures and optimum timings of control for the plants identified during the Gambara site survey are provided in Table 2.

Table 2. Weed species and their controls.

Weed Species	Optimum Timing of Control	Recommended Control Measures	Comments
Species: *Anredera cordifolia* **Common Name:** Madeira Vine **Status:** WoNS	Can be treated in any month except June, July and August	Scrape stems, then apply 1:2 Glyphosate in water or drill and fill thick vines with 100% Glyphosate.	Intensive follow up of resprouts at 2-4 leaf stage 2 to 3 times per year.
Species: *Avena fatua* **Common Name:** Wild Oat **Status:** Weed	June - September	Spray at 3-5 leaf stage with Fusilade® Forte at 16 ml/10 L + wetting agent or for generic fluazifop-p (212g/L active ingredient) 10ml/10L or 500ml/ha + wetting agent.	None.
Species: *Cynodon dactylon* **Common Name:** Couch Grass **Status:** Weed	November - February	Spray Fusilade® Forte at 13 ml/L + wetting agent or for generic fluazifop-p (212g/L active ingredient) 8mL/L + wetting agent when plants are small and beginning new growth then + 1% Glyphosate in late spring/summer and autumn when rhizomes are actively growing. Blanket spray.	Follow-up events are always required.
Species: *Cenchrus clandestinus* **Common Name:** Kikuyu Grass **Status:** Weed	November, December and January	Spray with 1% Glyphosate or Fusilade® Forte at 16 ml/L + wetting agent or for generic fluazifop-p (212g/L active ingredient) 10ml/L + wetting agent.	2-3 sprays over a single growing season are often required.
Species: *Echium plantagineum* **Common Name:** Paterson's Curse **Status:** Declared Pest	May - August	Spot spray in late autumn/winter when most seed has germinated for the year with 0.5 g/10 L chlorsulfuron + wetting agent, this will also help prevent further germination. Glyphosate at 75 ml - 100 ml/15 L or metsulfuron methyl 5 g/ 100 L applied at early flowering will control existing plants.	Causes acute disruption of ecological processes, dominates and/or significantly alters vegetation structure, composition and function of ecosystems.
Species: *Ficus carica* **Common Name:** Common Fig **Status:** Weed	December - February	Stem inject with 50% Glyphosate and foliar spray regrowth with 10% Glyphosate or cut and paint/spray with 50% Glyphosate.	None.
Species: *Fumaria capreolata* **Common Name:** White Fumitory **Status:** Weed	July, August and September	Spray metsulfuron methyl at 0.1 g/15 L (2.5 g/ha) + wetting agent or Glyphosate 0.5%.	None.
Species: *Gomphocarpus fruticosus* **Common Name:** Cotton bush **Status:** Declared Pest (2)	September - December	Cut and paint/spray with 50% Glyphosate. Hand remove if plant seed pods are present.	None.

Weed Species	Optimum Timing of Control	Recommended Control Measures	Comments
Species: *Lotus subbiflorus* **Common Name**: Hairy Bird's-foot Trefoil **Status:** Weed	November - January	0.1 g metsulfuron(600g/kg) plus 25 mL wetting agent in 10 L	provides good control but may damage young native species at these rates.
Species: *Lupinus cosentinii* **Common Name:** Blue Lupin **Status:** Weed	June - October	Spray dense infestations with metsulfuron methyl 0.1g/15 L (2-3 g/ha) + wetting agent.	Glyphosate is relatively ineffective. Check control success 7-days after control event.
Species: Mentha spp **Common Name:** Mint **Status:** Weed	September – February	Spray dense areas with 1% Glyphosate, wet areas may need Glyphosate bioactive.	None.
Species: *Phytolacca octandra* **Common Name:** Inkweed **Status:** Weed	October - December	Spray with 1% Glyphosate.	None.
Species: *Pinus pinaster* **Common Name:** Maritime Pine **Status:** Weed	All year	Hand pull or dig out seedlings ensuring removal of main root	None.
Species: *Ricinus communis* **Common Name:** Castor Oil **Status:** Weed	September - December	Foliar spray seedlings and small plants using 1% Glyphosate or cut and paint using 50% Glyphosate.	None.
Species: *Rumex obtusifolius* **Common Name:** Bitter Dock **Status:** Weed	October - December	Spray with 1% Glyphosate.	None.
Species: *Schinus terebinthifolius* **Common Name:** Brazilian Peppertree **Status:** Weed	December - March	Hand pull seedlings ensuring removal of all root material. Stem inject older plants using 50% Glyphosate or basal bark with 250 ml Access® in 15 L of diesel to bottom 50 cm of trunk during summer.	None.
Species: *Solanum nigrum* **Common Name:** Blackberry Nightshade **Status:** Weed	July - December	Spot spray with 1.5% Glyphosate.	None.
Species: *Watsonia meriana var. bulbillifera* **Common Name:** Watsonia **Status:** Weed	November-December	Wipe individual leaves with Glyphosate 10%	Herbicide application should take place when flowering stems are elongating and the parent corm is exhausted.
Species: *Zantedeschia aethiopica* **Common Name:** Arum Lily **Status:** Declared Pest (2)	June - September	For the most effective control spot spray Metsulfuron methyl 0.4 g/15 L of water (or 5g /ha) + 225 mL Glyphosate + Pulse. As Glyphosate is non-selective, only apply where there is no chance of off target application on native vegetation Otherwise, spot spray Metsulfuron	Herbicide application can send some tubers into dormancy therefore any control program needs to continue

Weed Species	Optimum Timing of Control	Recommended Control Measures	Comments
		methyl or chlorsulfuron 0.4 g/15 L of water (or 5g /ha) + Pulse.	for at least five years.

2.3 Weed Load

During the 2025 site survey, Gambara assessed and rated each 10 m by 10 m area within the Site for weed load. The following rating guide was used:

- Less than 10% weed load – Very Low Weed Load
- 11% to 25% - Low Weed Load
- 26% to 50% - Moderate Weed Load
- More than 50% - High Weed Load.

During the site visit, Gambara identified that the majority of the Site is infested with High level weed load. This is due to ground cover grasses and overstorey *Schinus terebinthifolius (Brazilian Peppertree)* infestations. Figure 2, Figure 3 and Figure 4 provide examples of the weed load on site.

Figure 2. High weed load in the wetland area of Site.

Figure 3. High weed load within the understorey areas of the Site.
Photograph taken by Jye McLeish on 20/11/2025.

Figure 4. High weed load in the native vegetation interface, including dense Brazilian Peppertree groves. Photograph taken by Jye McLeish on 20/11/2025.

The mapping presented in Appendix 1 provides a visual representation of the weed load rating across the entire Site.

2.4 Timing and Ongoing Activity

Gambara recommends undertaken a site-wide weed control event prior to any revegetation. This will involve the knock down of existing weed loads and prevention for future weed load. Specifically, Gambara recommends the following activities that will assist in weed control of the site.

- A blanket herbicide application grass-selective treatment for all grasses on site. A chemical product such as Haloxyfop or Fusilade is recommended.
- Spot spray/blanket spray where appropriate (lack of natives) of broadleaf weed load, such as Arum Lily, where these weed stands exist. The specific chemical should be used as per Table 2, however, Glyphosate and Metsulfuron-methyl should effectively treat broadleaf weeds. For wetland areas, a Roundup Biactive or similar product should be utilised.
- Cut woody weeds, such as Brazilian Peppertree, near base of stem and paint with 50% Glyphosate. Either remove woody weed material from site or mulch on site. Figure 5 displays dense Brazilian Peppertree populations.
- Prior to any planting works, blanket treat the Site with Simazine herbicide.
- For existing dead grassy weed load, brush-cut to ground level to remove fire risk and allow for better future herbicide penetration.

Gambara recommends the following timing for weed control treatments presented in Table 3.

Table 3. Timing for weed control activities.

Time Period	Activities
Summer (December to February)	One spot spray events for broadleaf weeds. Brush-cut dead grassy weed load. Blanket spray grasses with grass-selective herbicide. Cut and paste woody weed load.
Autumn (March to May)	Two spot spray events for broadleaf weeds. Simazine pre-treatment.
Winter (June to August)	Two spot spray events for broadleaf weeds. Blanket spray grass-selective herbicide. Essential timing to control weeds prior to weed load.
Spring (September to November)	Two spot spray events for broadleaf weeds. Blanket spray grass-selective herbicide. Essential timing to control weeds prior to weed load.

3. Vegetation Condition Survey

3.1 Vegetation Condition Summary

During the Gambara site survey the vegetation condition of the Site was assessed. Gambara utilised the Keighery Scale as presented in Table 4.

Table 4. Vegetation condition rating scale, as devised by Keighery and described by Bush Forever WA.

Condition	Description
Pristine	Pristine or nearly so, no obvious signs of disturbance.
Excellent	Vegetation structure intact, disturbance affecting individual species and weeds are non-aggressive species.
Very Good	Vegetation structure altered, obvious signs of disturbance. For example, disturbance to vegetation structure caused by repeated fires, the presence of some more aggressive weeds, dieback, logging and grazing.
Good	Vegetation structure significantly altered by very obvious signs of multiple disturbance. Retains basic vegetation structure or ability to regenerate it. For example, disturbance to vegetation structure caused by very frequent fires, the presence of some very aggressive weeds at high density, partial clearing, dieback and grazing.
Degraded	Basic vegetation structure severely impacted by disturbance. Scope for regeneration but not to a state approaching good condition without intensive management. For example, disturbance to vegetation structure caused by very frequent fires, the presence of very aggressive weeds, partial clearing, dieback and grazing.
Completely Degraded	The structure of the vegetation is no longer intact and the area is completely or almost completely without native species. These are often described as 'parkland cleared' with the flora comprising weed or crop species with isolated native trees or shrubs.

Gambara found that the majority of the native vegetation area is Degraded. In most areas, the vegetation structure is severely disturbed and lacks understorey. However, some natural regeneration of overstorey species is occurring. The dense weed ground cover weed load, especially grasses, are presenting an obstacle for native understorey growth. Prior to any understorey revegetation, weed load must be treated effectively. In the south-west of the site, there is a pocket of Very Good vegetation that has low weed load, understorey and overstorey presence. Figure 6 presents an image of this area.

The very northern tip of the site is Completely Degraded, with no understorey or overstorey. Similarly, in the middle east of the native vegetation area, there is a section of Completely Degraded land. The cleared land that interfaces with the foreshore vegetation area is also Completely Degraded. Mapping in Appendix 2 visually displays the vegetation condition of the site.

Figure 6. ‘Very Good’ vegetation area. Photograph taken by Jye McLeish on 20/11/2025.

4. Indicative Revegetation Zones

Gambara has identified six indicative revegetation zones throughout the Site. These are presented in Appendix 3 mapping, and are as follows:

- *Eucalyptus rudis* Full Revegetation.
- *Eucalyptus rudis* Understorey Revegetation.
- *Eucalyptus wandoo* Full Revegetation.
- *Eucalyptus wandoo* Understorey Revegetation.
- *Melaleuca* Woodland Understorey Revegetation.
- Wetland/Riverbank Revegetation.

4.1 *Eucalyptus rudis* Full Revegetation

The *Eucalyptus rudis* Full Revegetation zones are areas where the existing native vegetation type is *Eucalyptus rudis* open woodland but lacks understorey species and has sparse overstorey trees. These areas typically have high weed loads. For this zone, Gambara recommends the following:

- Installation of *Eucalyptus rudis* open woodland species at a rate of 4 per m2 for understorey and ground cover species and 2 per m2 for overstorey species.
- Weed control as per Section 2. Ensure zone has low weed load prior to install.

4.2 *Eucalyptus rudis* Understorey Revegetation

The *Eucalyptus rudis* Understorey Revegetation zones are areas where the vegetation type is *Eucalyptus rudis* open woodland but lacks understorey species. These areas typically have high weed loads. Gambara recommends the following:

- Installation of Eucalyptus rudis open woodland species at a rate of 4 per m2 for understorey and ground covers species.
- Weed control as per Section 2. Ensure zone has low weed load prior to install.

4.3 *Eucalyptus wandoo* Full Revegetation

The *Eucalyptus wandoo* Full Revegetation zones are areas where the vegetation type is *Eucalyptus wandoo* open woodland but lacks understorey and has sparse to no overstorey. These areas typically have high weed loads. For this zone Gambara recommends the following:

- Weed control as per Section 2. Ensure zone has low weed load prior to install.
- As the area is large and bare of native vegetation, rip and furrowing the ground with a tractor is an option to ensure better penetration of tube stock. For rip and furrow works, utilise the following specifications:
    - Internal furrow width measures 700 to 1300 mm, with a target width of 1000 mm;
    - Furrow measures 100 to 200 mm deep from ground level;
    - Rip measures 300 to 500 mm deep from ground level, with a target depth of 450 mm;
    - No gaps between furrows should occur, except for the soil making up the top of the furrows; and
    - Furrows to run perpendicular to the gradient as to minimise erosion.
- If rip and furrowing does occur, install seedlings into furrows as to accommodate an install rate of 4 stems per m2 for understorey and 2 stems per m2 for overstorey.
- If rip and furrow activities do occur, spread a 50:50 native seed to clean mix material at 1.3 kg per hectare across the rip and furrowed area.
- If rip and furrow activities are not undertaken, install seedlings across zone at a rate of 4 stems per m2 for understorey and groundcover species and 2 stems per m2 for overstorey species.

4.4 *Eucalyptus wandoo* Understorey Revegetation

The *Eucalyptus wandoo* Understorey Revegetation zones are areas where the vegetation type is *Eucalyptus wandoo* open woodland but lacks understorey. These areas typically have high weed loads. Gambara recommends the following:

- Installation of *Eucalyptus wandoo* open woodland species at a rate of 4 per m2 for understorey and ground covers species.
- Weed control as per Section 2. Ensure zone has low weed load prior to install.

4.5 *Melaleuca* Woodland Understorey Revegetation

The *Melaleuca* Woodland Understorey Revegetation zone is an area where the vegetation type is *Melaleuca rhaphiolpylla* dominated and can be described as a low open forest. This area typically has high weed load and lacks understorey. Gambara recommends the following:

- Installation of *Melaleuca rhaphiophylla* low open forest species at a rate of 4 per m2 for understorey and ground covers species.
- Weed control as per Section 2. Ensure zone has low weed load prior to install.

4.6 Wetland/Riverbank Revegetation

A wetland area, including a dry and water-filled stream were identified on site. The south-east wetland/riverbank area was filled with water during the site visit and likely remains wet all year round. The north and north-west wetland/riverbank areas were either dry, damp or wet, and are likely seasonally inundated during winter months. Figure 7 and Figure 8 depict wetland areas within the Site. For these areas, Gambara recommends the following:

- Installation of sedges, rushes and other native wetland species that are found within *Melaleuca* woodlands. Install on banks of permanently wet areas and throughout damp areas at a rate of 6 stems per m2.
- Treat any weed load with a Roundup Biactive or similar aquatic-friendly herbicide, as per schedule outlined in Section 2.
- Install native species able to survive seasonal inundation on dry river beds, such as *Melaleuca viminea* and *Lepidosperma longitudinale*, at a rate of 6 stems per m2.

Figure 7. 'Dry' riverbank in the north of the Site. Seasonally inundation species recommended. Photograph taken by Jye McLeish on 20/11/2025.

Figure 8. Water-filled stream in south-east of Site. Recommend install of native seedlings on bank and water adapted species on floor, if dry. Photograph taken by Jye McLeish on 20/11/2025.

5. Native Vegetation Edge Interface

During the site inspection, Gambara assessed and recorded the edge of the native vegetation extent and thus the interface with the cleared land area. Gambara utilised the QuickCapture program to record both the direct edge of the vegetation (the southern side of the vegetation edge trees) and the drip line (the limit of the native foliage). Gambara also recorded all native tree stems within 10 metres of the vegetation interface that measured greater than 30 cm in diameter at DBH. This data is presented visually in Appendix 4.

Gambara identified the following trees species with stems measured greater than 30 cm in diameter at DBH within 10 metres of the foreshore interface:

- *Eucalyptus rudis* – 47 individuals.
- *Melaleuca rhaphiophylla* – 40 individuals.
- *Melaleuca pressiana* – 1 individual.

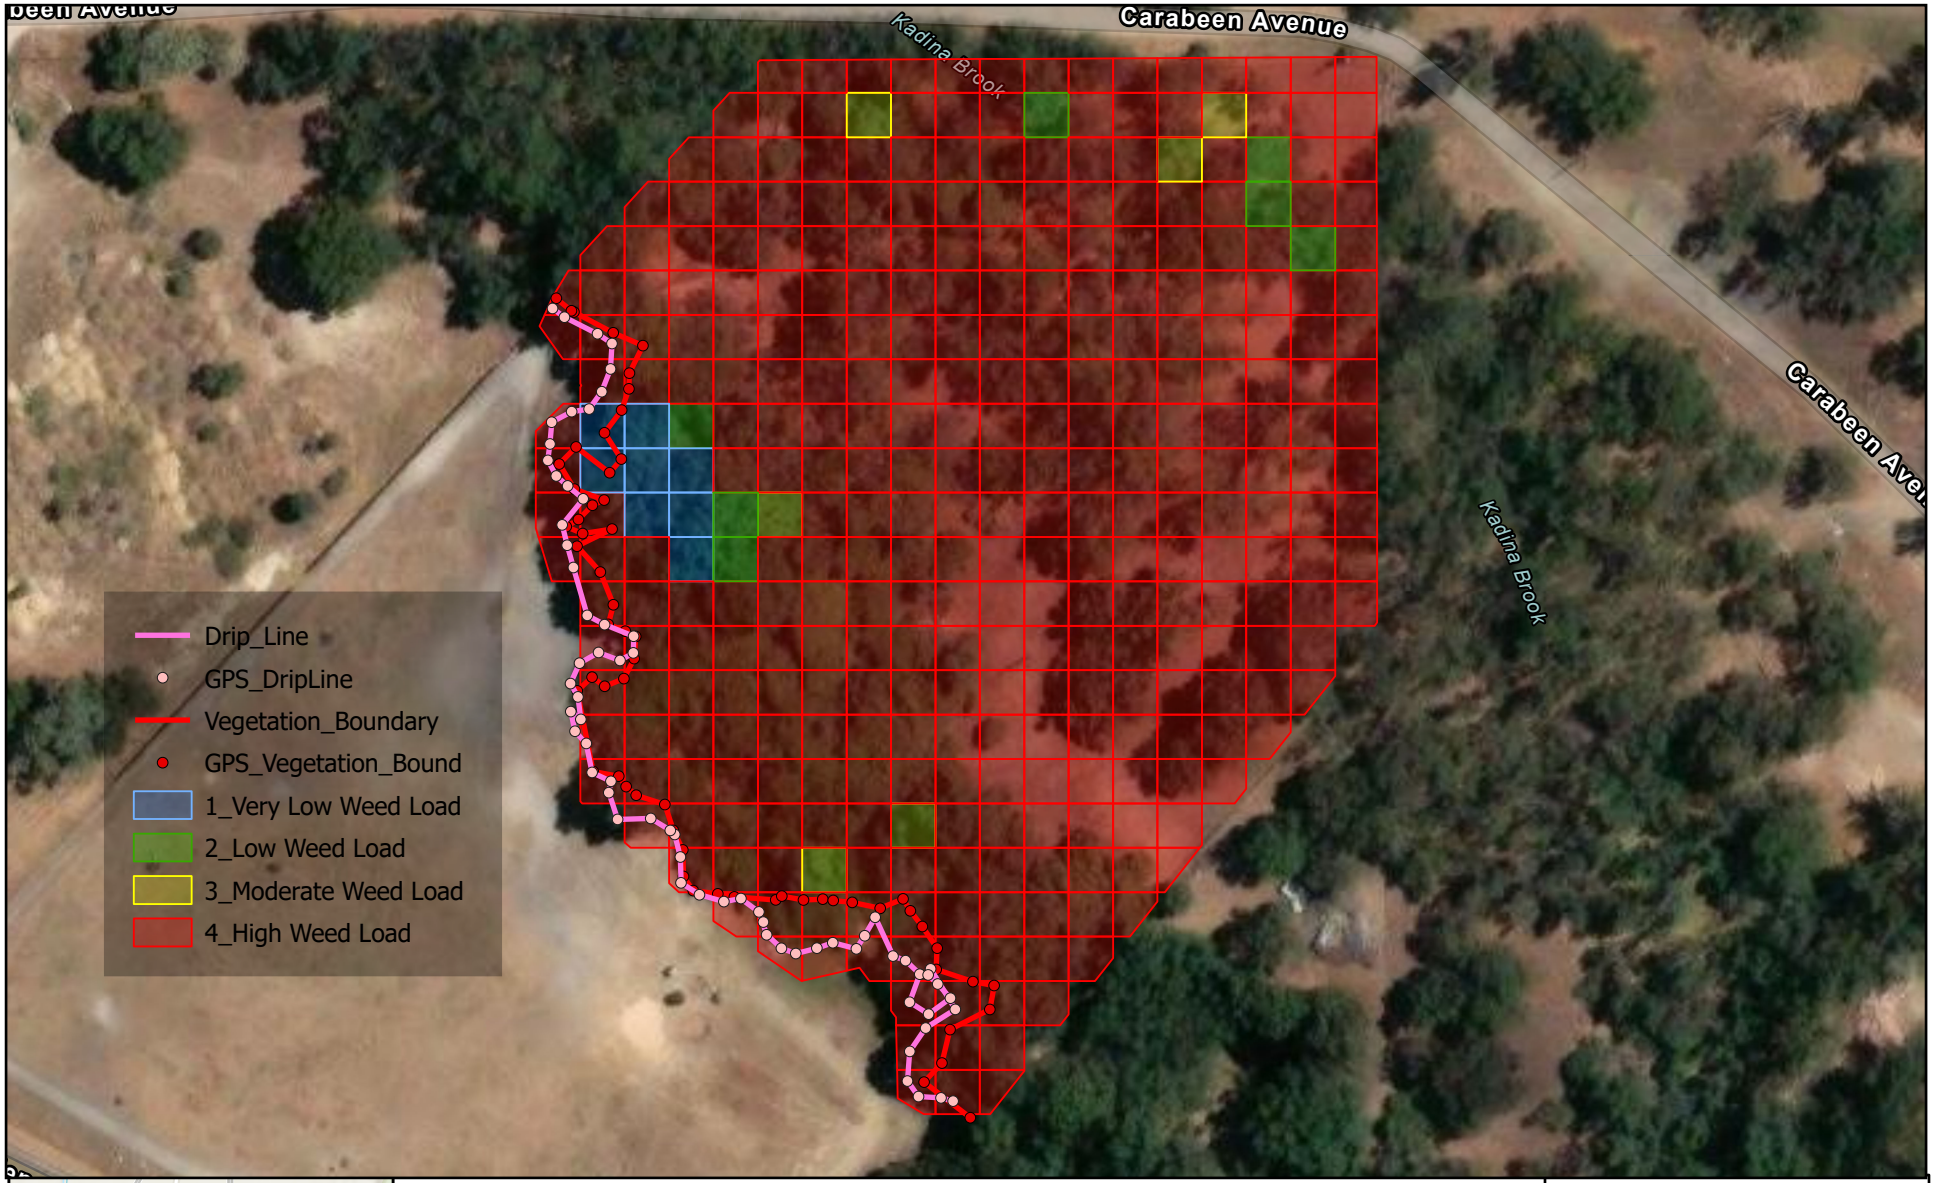

Figure 9 displays the dense tree population within the 10 metre area of the interface.
